REPORT

TO

HIS EXCELLENCY GEORGE HENRY, EARL CADOGAN, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Thirty-fourth Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1897 number 22,891; the Births 106,664; and the Deaths 83,839. The marriage-rate (5·03 per 1,000 of the estimated population) shows a slight decline as compared with that for the preceding year but is somewhat above the average rate for the ten years 1887–96; a like observation applies to the birth-rate (23·5 per 1,000); while the death-rate (18·4 per 1,000) is considerably in excess of the low rate (16·6 per 1,000) for 1896, and slightly over the average rate for the ten years 1887–96.

The recorded natural increase of population, or excess of births over deaths, was 22,825: the loss by emigration amounted to 32,535; there would thus appear to have been a decrease of 9,710 in the population during the year, but against this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,551,723.

TABLE I.—Showing for each of the years 1887–97, the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1887–96.

* See page 189.

There are 2,630 Local Registration Officers holding office directly under the Department or who have entered into bonds with the Registrar-General for the due discharge of their duties. During the year 1897, 574 cases of vacancies or appointments were dealt with.

I append a table showing the number of Searches made, and Certificates issued at the General Register Office; also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864. The entries under these heads in 1897 show a slight falling off as compared with the numbers for the year 1896, but are considerably in excess of those for any earlier year.

TABLE II.—NUMBER of SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 34 years 1864–97.

During the financial year ended 31st March last 601 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 115 cases prosecutions were ordered to be instituted against the offenders. In 71 of these the parties were convicted and punished; in 38 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; and in 6 cases the summonses were dismissed.

The cases dealt with included the following offences:—Neglect to register Births; neglect to register Deaths; neglect to furnish Certificate of Marriage; failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Registrar to produce Quarterly Returns; loss of Register Book.

A general statement regarding the return of the various offences and the proceedings taken in connection therewith will be found at page 194.

MARRIAGES.

The number of Marriages registered during the year is 22,891, being equal to 5·03 per 1,000, of the estimated population,* a rate which is ·03 below that for the previous year, but ·41 above the average for the ten years 1887–96.

Of the 22,891 Marriages registered during last year 15,638 were between Roman Catholics; 3,831 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,492 were in Presbyterian Meeting-houses; 529 in "Registered Buildings" belonging to various religious denominations; only 384 by civil contract in the Registrars' offices; 11 were according to the usages of the Society of Friends; and 6 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·56 per 1,000 of the estimated number of Roman Catholics, being 0·38 over the corresponding average rate for the preceding ten years, and the other Marriages represent a rate of 6·48 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·45 over the corresponding average rate.

Of the 3,831 Marriages according to the rites of the Church of Ireland, 38 were by special licence, 3,262 by licence, 483 after the publication of banns, 17 on Registrar's certificate, and in 31 instances there was no information afforded as to which of these methods was adopted

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years, and the rates for Provinces and Counties are based on the population according to the Census of 1891.

TABLE IV.—**Marriages** registered in Ireland in 1897 and each of the previous ten years, according to the **modes of celebration**; with the **rate** per 1,000 of the population represented:—

During the year 1897 there were issued by the Registrars 816 Licences for Marriages in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1897.	Number of Registered Meeting-houses on 31st December, 1897.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	153	580	2,281
2. Remonstrant Synod of Ulster, ...	8	19	39
3. Presbytery of Antrim, ...	6	10	24
4. United Presbytery or Synod of Munster, ...	2	2	.
Total, ...	169	611	2,344

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1897, there were 1,487 churches and chapels of the Church of Ireland, 611 registered Presbyterian Meeting-houses, and 388 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show a decrease of 1 as regards the Church of Ireland, an increase of 4 in the number of Presbyterian Meeting-houses, and an increase of 7 in the total number of "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1897:—

Denominations.	No. of Places of Worship.
Methodists, . . .	232
Reformed Presbyterians, .	38
Independents, . . .	24
Baptists, . . .	24
Christian Brethren, . .	14

Congregational Union of Scotland, ...	1
Total, . .	388

Of the 22,891 marriages registered during the year 1897 there were recorded—in the first quarter 7,603; in the second, 4,897; in the third, 5,235; and in the last, 5,156.

The marriages of bachelors and spinsters constitute 87·7 per cent. of the total; those of widowers and spinsters 7·9 per cent.; of bachelors and widows 2·7 per cent.; and of widowers and widows 1·7 per cent. Thus, 9·6 per cent. of the men married were widowers, and 4·4 per cent. of the women were widows; and in 12 instances in every 100 marriages one or both of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1887–97, and the average number for the ten years 1887–96, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1897 the ages of both parties were specified in 4,026 cases only, being less than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 22,891 men married during the year, 427, or 1·87 per cent., were minors; and of the women married, 1,902, or 8·31 per cent., were under age.

The highest proportion of husbands (2·43 per cent.) married under age in 1897, was in the province of Leinster, and in the province of Ulster there was the highest per-centage of wives (9·38), not of full age.

It may be added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificate, afford a rough test of the progress of elementary education. In the year 1897, 19,421, or 84·8 per cent., of the husbands, and 19,857, or 86·7 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures show a considerable improvement as compared with the corresponding results in the first of the preceding ten years, the per-centage of persons married in 1887 who wrote their names being—men 77·8, and women 75·2, and they exhibit a great advance when compared with the per-centage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married wrote their names.

The per-centages for the several provinces last year range, for men, from 79 in Connaught to 87 in Leinster and Munster, and, for women, from 84 in Connaught to 90 in Munster.

In 1,419 cases both of the parties married signed the register by "mark," and in 3,666 the register was thus signed by either the husband or the wife, so that in 5,085 cases, or 22·2 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 17,806, or 77·8 per cent., *both* parties wrote their names.

The proportion per cent. of persons married in each of the eleven years 1887–97, who wrote their names in the registers or certificates, of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the year 1887–97, the proportion per cent. of Persons who **signed their Names**, of Persons **not of Full Age**, and of **Re-marriages.**

	1897,	78·5	83·5	0·61	6·56	9·01	3·10

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·7 per 1,000 of the population, according to the Census of 1891; Leinster comes next with 5·2 per 1,000; Munster third, with 4·2 per 1,000; and Connaught last, the rate being 3·4 per 1,000.

The highest rate for any county was 8·4 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·1 per 1,000, for Roscommon. Between these, the most favourable were 7·4 for Dublin, and 5·7 for Down; and the least so 3·3 for Clare, and 3·4 for Queen's, Galway, Mayo, and Sligo.

BIRTHS.

The number of births registered during the year 1897 is 106,664—54,679 boys and 51,985 girls, or 105·2 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·7, or 23·5 per thousand, which is 0·6 over the average rate per 1,000 for the ten years, 1887–96.

Of the 106,664 children whose births were registered in Ireland during the year 1897, 103,862, or 97·4 per cent. were legitimate, and 2,802, or 2·6 per cent., were illegitimate: the average per-centage of illegitimate for the preceding 10 years was 2·7. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 53,235 were males, and 50,627 females, being 105·2 of the former to every 100 of the latter, and of the illegitimate children 1,444 were males, and 1,358 females, or 106·3 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·6; in Leinster, 2·5; in Munster, 2·4; and in Connaught, 0·7.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1893–97, by Provinces.

Provinces.	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

LEINSTER, . . .	97·5	97·3	97·5	97·6	97·5	2·5	2·7	2·5	2·4	2·5
MUNSTER, . . .	97·8	97·8	97·7	97·7	97·6	2·2	2·2	2·3	2·3	2·4
ULSTER, . . .	96·3	96·1	96·1	96·3	96·4	3·7	3·9	3·9	3·7	3·6
CONNAUGHT, . . .	99·3	99·3	99·3	99·4	99·3	0·7	0·7	0·7	0·6	0·7

The respective total birth-rates for the provinces in 1897 were—Leinster 23·0 per 1,000 of the population in 1891; Munster, 21·2; Ulster, 24·4; and Connaught, 20·5.

The four counties having the highest rates are Antrim, 31·1 per 1,000 of the population in 1891; Down, 28·6; Dublin, 28·2; and Armagh, 22·9. Those with the lowest rates are—Cavan, 17·6; Monaghan, 17·6; Roscommon, 18·1; and Longford, 18·5.

Of the total births, 52·2 per cent. were registered in the first six months of the year (181 days), and 47·8 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 28,157 ; in the second, 27,525 ; in the third, 26,206 ; and in the fourth, 24,776.

DEATHS.

The number of deaths registered during the year is 83,839, being equal to 1 in 54·3 or 18·4 per 1,000 of the estimated population. The deaths of males number 41,582, and those of females 42,257, the former being equal to 18·4 in every 1,000 males living and the latter representing 18·5 per 1,000 females.

The death-rate (18·4) is 0·3 over the average rate for the preceding ten years, and 1·8 over the rate for the year 1896.

As usual, very many of the Registrars furnished at the close of each quarter valuable notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this Department, and it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 14·2 ; that for Munster is 15·8 ; for Ulster, 19·1 ; and for Leinster, 20·3 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Kerry, 12·8 ; Roscommon, 13·7 ; Mayo, 13·9 ; and Sligo, 14·0.

Those in which the rate was highest are—Dublin, 27·1 ; Antrim, 23·0 ; Down, 19·9 ; and Armagh, 19·4.

The deaths registered in the first half of the year generally outnumber those in the second. In 1897, 57·1 per cent. of the total deaths were registered in the six months, January to June inclusive, and 42·9 per cent. in the remaining six months of the year.

The annual rates represented by the deaths registered in each quarter are as follow:—First quarter, 22·9 per 1,000 of the population ; second, 19·2 ; third, 15·4 ; and fourth, 16·2. The rates for the first three quarters are above, and that for the fourth quarter is below, the corresponding average rates for the respective quarters in the ten years, 1887–96.

From the Table on pp. 174–183 *it will be seen that, of the* 83,839 *deaths registered during the year,* 2,574 *took place in Infirmaries and General and Special Hospitals ;* 1,094 *in Public Lunatic Asylums;* 9,524 *in Workhouses and Workhouse Hospitals; and* 70,647 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 184–5) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

The deaths in "Infirmaries and General and Special Hospitals" constitute 3·1 per cent. of the total number, the per-centages for the four provinces varying from 0·4 in Connaught to 7·7 in Leinster. Over eleven per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 12·9 ; Munster, 16·7 ; Ulster, 7·8 ; and Connaught, 8·7.

TABLE VIII.—Showing, by **Quarterly Periods**, the number of **Births** and **Deaths** registered in Ireland in each of the eleven years, 1887–97, and the average number for the ten years, 1887–96

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1897 was 9,133 (4,499 males and 4,634 females), or 201 in every 100,000 of the estimated population, being 2,451, or 37 per cent., over the number for the preceding year and 1,134, or 14 per cent., over the average for the ten years, 1887–96.

Of the 9,133 deaths from zymotic diseases 5,516, or 60·4 per cent., were amongst children under 10 years of age.

The deaths from the principal zymotic diseases* registered during 1897 form 8·1 per cent. of the deaths from all causes, and are equal to 150 in every 100,000 persons living; the average annual mortality from the same diseases in the preceding 10 years represented 7·0 per cent. of the average number of deaths from all causes, and was equal to 126 deaths in every 100,000 of the population.

* Small-pox, Measles, Scarlet Fever, Typhus, Whooping-cough, Diphtheria, Simple Continued and Ill-defined Fever, Enteric Fever, Diarrhœa, Dysentery, and Cholera.

TABLE X.—Showing the Number of Deaths from All Causes and from each of Certain Febrile or Zymotic Diseases registered in the several Provinces of Ireland during each of the ten years, 1888–97; with the Rates per 100,000 of the Population.*

* See Note (*) on page 3.

Small-pox.—The only deaths from small-pox registered in Ireland during the year 1897 were 2 in Dublin South Union, and 1 in the Union of Ballinrobe; in no case did the entry contain any statement as to vaccination. During the preceding year there were but 4 deaths from the disease; in the year 1895 it caused 146 deaths, and in the year 1894 there were 72 deaths from it, but the total number for the seven earlier years of the decennium, 1887–96, was 25.

Measles was epidemic in the Dublin Registration District in the earlier months of the year, and the deaths from it there during the year amounted to 471, or 1·3 per 1,000 of the population at all ages; in Belfast and Cork, too, the fatal cases of the disease were numerous, those in Belfast Union amounting to 133, or 0·5 per 1,000 living; and those in Cork Union to 86, or 0·6 per 1,000 of the population. There are also some other localities in which the mortality from measles was heavy in proportion to population, with the result that the total number of deaths for Ireland amounted to 1,070, or 162 in excess of the average for the preceding ten years, and more than double the number (516) for the year 1896. The distribution of the deaths from this cause among the provinces was:—Leinster, 566; Munster, 196; Ulster, 241, and Connaught 67, the death-rate in Leinster being more than treble that for the remainder of the country.

Scarlet Fever.—During the decennium 1887–96, the annual number of deaths from scarlet fever varied from 973 in the first year to 308 in the year 1891, the average number for the ten years being 572, and the number in 1896 amounting to 752. The number for last year is 522, or about 9 per cent. below the average, and showing a decline of 31 per cent. when compared with the number for 1896. About one-fourth of the total mortality from scarlet fever for last year occurred in the Dublin Registration District, where the deaths from it amounted to 136, a number equal to a rate of 0·4 per 1,000 living. The respective numbers for the four provinces are:—Leinster, 241; Munster, 77; Ulster, 166, and Connaught, 38.

Typhus.—During recent years there has been an almost continuous decline in the mortality from typhus in Ireland. The number of deaths last year is 121, only, being 162 below the average for the ten years 1887–96, and not equal to one-third of the number (405) for the first year of that period. There are 9 Unions or Superintendent Registrars' Districts, in each of which 5 or more deaths from typhus were registered last year, and the aggregate deaths (59) from the disease in these Unions constitute about one-half of the total for Ireland. In 108 of the 159 Unions no deaths from typhus were registered. The total number for Leinster is 22, for Munster 39, for Ulster 25, and for Connaught 35.

Simple continued and ill-defined Fever.—There were but 79 deaths tabulated under this heading, being 54 below the number for the preceding year, and little more than one-third of the average for the ten years 1887–96. Of the 79 deaths, 26 occurred in the province of Leinster, 13 in Munster, 18 in Ulster, and 22 in Connaught.

Enteric Fever.—Both absolutely and in proportion to population the mortality from enteric fever last year was greater than in any year during the preceding decennium, but the death rate represented by it was only 0·22 per 1,000 of the estimated population. The number of deaths is 998, being 282 or 40 per cent. above the number for the preceding year, and 193 or 24 per cent. in excess of the average for the ten years 1887–96. Considerably more than one-third of the total mortality from enteric fever last year occurred in Belfast Union, where the disease caused 399 deaths, a number equal to 1·4 per 1,000 of the population according to the Census of 1891, and showing an increase of 236 when compared with the number of deaths from the cause in Belfast Union during the year 1896. In the Dublin Registration District there were 179 fatal cases of the disease (equal to 0·5 per 1,000 of the population), so that the deaths in the two areas of Belfast Union and the Dublin District form 58 per cent. of the total number for Ireland. The provincial rates per 100,000 of the population, according to the Census of 1891, were:—Leinster, 22·2; Munster, 10·8; Ulster, 34·9; Connaught, 5·7. More than one-half of the total mortality from the disease occurred among persons aged 15 years and under 35.

Whooping-cough.—The increase in the mortality from whooping-cough is the chief factor in the advance in the zymotic death rate last year, the deaths from this cause amounting to 1851—equal to 40·7 per 100,000 of the population at all ages—or nearly double the number for either of the two years immediately preceding, and showing an excess of 596 or 47 per cent. over the average for the ten years 1887–96, and an increase of

TABLE XI.—Showing for the year 1897 the Deaths from the several forms of Fever at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

358 as compared with the highest number for any year in the period. Dublin and Belfast furnish about one-third of the total number, the deaths in the Dublin Registration District amounting to 401 or 1·1 per 1,000 living at all ages, and those in Belfast Union numbering 211 or 0·7 of the population according to the Census of 1891. The abstract on pages 176–83 shows that outside of Belfast and Dublin there was a widespread prevalence of the disease, there being five Unions or Superintendent Registrars' Districts where the deaths exceeded 1 per 1,000 of the population at all ages, and many Unions in which, although the mortality did not reach this high rate the deaths were very numerous. The five Unions with the highest rates are Carrick-on Suir (22 deaths) 1·1 per 1,000 of the population; Claremorris (37 deaths) 1·3 per 1,000; Lismore (16 deaths) 1·1 per 1,000; Longford (41 deaths) 1·6 per 1,000, and Oughterard (23 deaths) 1·2 per 1,000. Of other Unions where the mortality was excessive there may be mentioned Armagh, with 21 deaths; Castlereagh, 31; Cork, 66; Downpatrick, 39; Galway, 37; Granard, 21; Newry, 46; Parsonstown, 28; Rathdown, 33; and Swineford, 23. As regards the provinces, the whooping-cough death-rate for Leinster is 56·7 per 100,000 of the population according to the Census of 1891; for Munster, 23·7; for Ulster, 38·2; and for Connaught, 38·8.

Diphtheria.—Although slightly more numerous than in either of the two years immediately preceding, the deaths (339) from diphtheria during 1897 show a small decline as compared with the average for the ten years 1887–96. Those in the following five Unions taken together constitute nearly one-half of the total mortality from this cause—Belfast, 48 deaths; Cork, 22; Dublin North, 17; Dublin South, 54; Mallow, 14. The gross number for the province of Leinster is 126; for Munster, 60; for Ulster, 139; and for Connaught, 14.

Erysipelas.—Deaths from erysipelas which had fallen from 284 in the year 1894 to 216 in the following year, and to 179 in 1896, further declined last year to 140 or 78 under the average for the ten years 1887–96.

Puerperal Fever.—The mortality from this disease also shows a marked decline in recent years, the number of deaths for 1894 having amounted to 454, while in the next year the deaths fell to 321; in 1896 to 252; and in 1897 to 228, or but one-half of the number in 1894.

Influenza.—From the year (1864) in which the registration of Deaths was established in Ireland up to and including the year 1889, the highest annual number of deaths from influenza was 311, while in one year the deaths from this cause fell to 21. In 1890, however, there were 1,712 fatal cases, and for the seven years 1890–6, the average number was 1,759, the extremes of the yearly numbers for that period being 3,742 in 1892, and 729 in 1896. During last year there were 1,535 deaths, a number equal to 3·4 per 10,000 of the estimated population, the four provincial rates (calculated on the population according to the Census of 1891) being—Leinster, 2·6 per 10,000; Munster, 1·6; Ulster, 4·8; and Connaught 3·5. The highest county rate was 8·6 per 10,000 for Londonderry, the lowest 0·9 for Kildare, Limerick, and Monaghan. More than one-half of the 1,535 deaths from the disease occurred among persons aged 55 years and upwards.

The Table (XII.) on the opposite page shows by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

TABLE XII.—Showing, by Provinces and Counties, the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1897, with the rate per 10,000 of the population* represented by the deaths at all ages.

* See Note on page 3. † Including part of the County of the Town of Drogheda.

Simple Cholera.—The number of deaths ascribed to this disease is 201, against 142 for the preceding year, and an average of 90 for the ten years 1887–6. Of the 201 deaths, 46 were in Leinster, 39 in Munster, 110 in Ulster (including 90 in Belfast Union), and 6, only, in Connaught.

Diarrhœa, Dysentery.—The number of deaths tabulated under this heading is 1,640, being 226, or 16 per cent. over the average for the ten years 1887–96, and 219 over the number for the year 1896. The rate per 100,000 living represented by the deaths from these causes is 36·0, being 5·8 over the average rate for the preceding ten years. The respective rates for the four provinces are—Leinster, 42·0 per 100,000 of the population according to the Census of 1891; Munster, 27·5; Ulster, 45·6; and Connaught, 11·2. Sixty-four per cent. of the deaths under this heading in Leinster were in the Dublin Registration District, and 50 per cent. of those in Ulster occurred in the Union of Belfast.

Two males and two females died from *Hydrophobia.* One of these deaths occurred in the province of Munster, 2 in Ulster, and 1 in Connaught.

II.—Parasitic Diseases.

There were only 47 deaths from diseases of this class: the number is 6 under that for the year 1896.

III.—Dietetic Diseases.

The number of deaths from dietetic diseases is 183, including 166 from intemperance, 49 of which (41 males and 8 females) were caused by delirium tremens, and 117 (90 males and 27 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the year 1896 was 156, and in the preceding year 188.

IV.—Constitutional Diseases.

From diseases classified as "constitutional" there resulted 16,592 deaths (8,040 males and 8,552 females), affording a rate of 1 in 5·1 of all the deaths, and equal to 365 in every 100,000 of the population.

Phthisis or Pulmonary Consumption.—Allowing for decrease of population, the mortality from phthisis in 1897 was slightly above the average for the preceding ten years; it was also in excess of that for any of the four years 1893–6. The number of deaths is 9,748 (4,676 males and 5,072 females), or 214·2 in every 100,000 of the estimated population; the average for the preceding ten years was 9,867, or 210·8 per 100,000, the annual rates for that period varying from 198·5 in 1896 to 216·6 in 1892.

As heretofore, Leinster and Ulster yield the highest rates, and Connaught the lowest. The rates for the four provinces are as follow:—Leinster, 230 per 100,000 of the population; Ulster, 224; Munster, 189; and Connaught, 161.

Of the 3,624 deaths from phthisis in Ulster, 1,089 occurred in Belfast union, this number being equal to 376 per 100,000 of the population according to the Census of 1891; and the 2,735 fatal cases of the disease in Leinster comprise 1,151, or 329 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,314, or 75 per cent., were of persons aged 15 and under 45 years of age.

Tabes Mesenterica caused 1,023 deaths (an increase of 224 as compared with the number for the preceding year), and *Tubercular Meningitis* 1,158, and 1,080 deaths come under the head of *Miscellaneous forms of Tuberculosis, Scrofula.*

Tuberculosis.—The deaths from phthisis and those recorded under the three headings last referred to, comprise nearly all the deaths from tuberculosis, and it may be seen that, taken together, they amount to 13,009, which number is equal to 15·5 per cent. of the deaths from all causes registered in Ireland during the year, and represents a mortality equivalent to 2·9 per 1,000 of the population.

In view of the special interest attaching to the subject at the present time, and having regard to the fact that the statistics show that this high death rate is not much over the average rate yielded by the mortality from these causes in Ireland during a long series of years, I have had the following Table (Table XIII.), constructed. It shows the deaths from each chief form of tubercular disease during the year 1897, and each of the 26 years preceding, with the ratio of these deaths to the deaths from all causes and to the population. Decennial averages and averages for the 26 years, 1871–96, are also

included. The average rate per 1,000 of the estimated population for the whole of this latter period was 2·7 per 1,000, which was also the average rate for the ten years 1881–90, and the six years 1891–6. The average for the ten years 1871–80 was slightly less, viz.:—2·6 per 1,000, but as regards this rate it may be observed that it is most probably somewhat under the actual average, as in the absence of the aid derived from the system of Burial Returns introduced in the year 1879, under the Public Health Act of 1878, the registration of deaths was not as full or satisfactory as it has become since that date. Taking the years from 1879 up to the present time, the average rate was 2·7, and it will be seen that the extreme rates were 2·9 and 2·5 per 1,000, the former being the rate for the year 1880 and for last year, and the latter that for the year 1881.

TABLE XIII.—Showing the Number of Deaths from the following causes, viz:—Tabes Mesenterica, Tubercular Meningitis, Phthisis, "Miscellaneous Forms of Tuberculosis, Scrofula," and from All Causes registered in Ireland in each of the twenty-seven years, 1871–97, with the Rate per 1,000 of Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis; (*b*) Deaths from all causes; and the per-centage of total Deaths caused by the tubercular diseases referred to.

Years.	Number of Deaths from				Total Deaths from all the foregoing causes.		Total Deaths from all causes		Per-centage of Deaths caused by the Diseases named in Columns 2, 3, 4, and 5.

Gout.—The number of deaths from gout is 26 (13 males and 13 females); it shows a decrease of 5 as compared with the number for the preceding year, which was 10 over that for 1895.

Cancer.—Cancer caused 2,635 deaths (1,214 males and 1,421 females), being 423 or 19 per cent. over the average for the ten years 1887–96, and 198 over the highest number for any year of that period, which was 2,437, the number for 1896.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1897, arranged according to the part of the body affected by the disease; also the number of deaths to 100,000 of the living at same age. It will be observed from the Table that the deaths entered under the first eleven headings therein, which relate to various parts of the head, neck, and throat, amount to 542, and that of these, 387, or more than two-thirds, were deaths of males. 653 of the classified cases were deaths from cancer of the stomach; 298 females died from cancer of the breast, and 177 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1887–96, arranged by Age-periods.

* Including 7 Ventricles, 7 Prostate, 4 Pelvis, 3 Mesentery, 3 Gall Bladder, &c.

V.—Developmental Diseases.

The number of deaths in this class is 18,726, of which 18,004 (8,255 males and 9,749 females), or 21·5 per cent. of the deaths from all causes, were ascribed to "old age." Of the remaining 722 deaths, 604 are tabulated under the head of "premature birth"; 21 were caused by atelectasis, 10 by cyanosis, 43 by spina bifida; &c.

VI.—Local Diseases.

The deaths from "local diseases" amount to 31,926 (16,224 males and 15,702 females), or 38·1 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From diseases in this group there resulted 6,514 deaths—3,389 males and 3,125 females. They include 2,264 from convulsions (nearly all children), 1,191 tabulated under the head of "hemiplegia, brain paralysis"; 277 from paraplegia and diseases of the spinal cord; 1,253 from apoplexy; 350 from inflammation of the brain or its membranes; 257 from epilepsy; 437 tabulated under the heading "insanity, general paralysis of the insane"; 13 (5 males and 8 females) from chorea or St. Vitus's dance; 158 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 5,870 deaths—2,875 males and 2,995 females.

*Diseases of the Respiratory System.**—The decline in the mortality from diseases of the respiratory system,* noted in the Report for 1896, was not maintained last year, but the deaths from these causes were below the average for the ten years 1887–96, and, with the exception of 1896, were both, absolutely and in proportion to population, less than in any year during that period. The number of deaths for last year is 12,857—6,612 males and 6,245 females—or 282·5 in every 100,000 of the population; in the preceding year there were only 11,236 deaths from these causes registered, being equal to 246·4 per 100,000 living, but the average number for the ten years, 1887–96, was 14,396, or 307·2 per 100,000 living. The respective rates for the Provinces, in 1897, are—Leinster, 320 per 100,000 persons; Munster, 240; Ulster, 306; and Connaught, 178.

Of the 12,857 deaths from these causes, 7,737 (3,695 males and 4,042 females) were from bronchitis; 3,710 (2,167 males and 1,543 females) from pneumonia or inflammation of the lungs; 451 from croup; 255 from asthma and emphysema; 220 from pleurisy; 124 from laryngitis; &c.

Diseases of the Digestive System.—These diseases caused 4,024 deaths (2,062 males and 1,962 females), including 339 from enteritis or inflammation of the bowels; 396 from peritonitis or inflammation of the covering of the bowels; 404 tabulated under the heading of "ileus, obstruction of the intestine"; 123 from hernia; 4 (3 males and 1 female) from fistula; 311—193 males and 118 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,563 deaths (1,022 males and 541 females) were ascribed. Of these deaths, 617 (351 males and 266 females) were from Bright's disease; 313 from acute nephritis or inflammation of the kidneys; 26 from suppression of urine; 13 from stone in the bladder; 51 from uræmia, &c.

The remaining deaths from Local Diseases comprise 59 from *Diseases of the Lymphatic System and of Ductless Glands*; 600 from *Diseases of the Reproductive System* (including 132 from diseases of the Organs of Generation and 468 from the Accidents of Childbirth); 234 from *Diseases of the Organs of Locomotion;* and 154 from *Diseases of the Integumentary System.* The deaths from the Accidents of Childbirth and those from Puerperal Fever combined are equal to one death for every 153 births registered.

VII.—Violent Deaths.

The number of violent deaths registered during the year is 2,039 (1,417 males and 622 females), or 44·8 in every 100,000 of the population, being somewhat higher than the average rate for the ten years 1887–96. Accidents or negligence caused 1,861 of these deaths (including 395 from burns or scalds and 347 from drowning) against an average of 1,687; the number of cases of homicide (murder and manslaughter) was 50, or 32 below the average; and the number of cases of suicide was 128 against an average of 125.

Inquests.—There were 2,839 inquests reported to the Registrars during the year 1897, being 1 inquest to every 30 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 11,648, being equal to 10·9 per cent. of the number of births registered. The corresponding average per-centage for the preceding ten years was 9·8.

Amongst children under 5 years of age 18,910 deaths occurred—a mortality equal to 41·6 in every 1,000 of the estimated number of the living at that age. Of these, 10,077 were boys and 8,833 girls; the former number representing 43·7 in every 1,000 boys and the latter 39·5 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

The deaths of persons aged 65 years and upwards are equivalent to 9·7 per cent. of the estimated number of the living at that age.

Among the deaths registered are 825 of persons stated to have been aged 95 years or upwards—400 males and 425 females; of these 170 (77 males and 93 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland), who left Ireland during the year 1897 was 32,535; of these 13,966 were males and 18,569 were females. Of the whole number, 3,210 were from the Province of Leinster; 12,798 from Munster; 6,266 from Ulster; and 10,261 from Connaught.

Of the total emigrants from Ireland in 1897, 7·1 per cent. were under 15 years of age; 83·0 per cent. were between 15 and 35 years old; 9·9 per cent. were 35 or upwards; and in 5 instances the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin in the year 1897 was $5\frac{3}{4}d.$, being $\frac{3}{4}d.$ over the average price for the previous year.* Oatmeal (1st quality) averaged 13*s.* 6*d.* per cwt. in Dublin: the average price for 1896 was 12*s.* 7*d.*; the average prices of potatoes in Dublin ranged from 2*s.* 5*d.* to 3*s.* 9*d.* per cwt., against 1*s.* 11*d.* to 2*s.* 11*d.* in 1896; and those of beef from 44*s.* 6*d.* to 57*s.* per cwt., against 43*s.* 6*d.* to 54*s.* in 1896.

Table XV.—Average Prices in Dublin of Bread, Oatmeal, Potatoes, and Beef, during the years 1887–97, and the Average Number of Persons in Ireland receiving In-Door and Out-Door Relief on Saturdays in those years; also the Average Prices of Provisions and the Average Number of Persons in Receipt of Relief during each quarter of the year 1897.

* Prices for the year 1887, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Manders & Co., those for the third and fourth quarters of 1888 and for the years 1889–97 from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Surveying the period covered by several Tables in this Report, *i.e.*, 1897, and the ten years preceding, it is found that beef was lowest in the year 1887, when the average prices ranged from 44*s.* to 53*s.* 6*d.* per cwt., and 1896 when they ranged from 43*s.* 6*d.* to 54*s.*; oatmeal (1st quality) was cheapest in 1896, in which year the average price was 12*s.* 7*d.* per cwt.; and potatoes, in 1896, when the average range of prices was from 1*s.* 11*d.* to 2*s.* 11*d.* per cwt. The highest average price of oatmeal was 15*s.* 5*d.* in 1891 and 1892; the highest range for potatoes, 3*s.* 6*d.* to 4*s.* 2*d.* per cwt. in 1891, and for beef, 50*s.* 6*d.* to 62*s.* per cwt. in 1890.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1897 was 42,849, being 859 over the average for the preceding year; and that the average number of persons receiving out-door relief was 54,696, or 300 over the corresponding number for 1896.

THE WEATHER.

The following particulars and those given on pages 23–46, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1897–98. The Tables on pages 186–188, also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·005 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1897 was 29·911 inches. The highest observed reading was 30·654 inches at 9 P.M. on November 20th. The lowest observed reading was 28·740 inches, at 11 P.M. on December 29th. The extreme range of atmospherical pressure was 1·914 inches compared with 2·427 inches in 1896.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 50·6°. The highest reading was 76·8° on August 4th; the lowest reading was 25·0° on January 17th. The average mean temperature for the years 1877–96, calculated in the same way, was 48·7°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 49·6°.

Rain fell on 211 days, including snow or sleet on 14 days and hail on 30 days. The average annual number of rainy days in the years 1877–96 was 196·9. The total rainfall measured 29·344 inches compared with an average of 27·643 inches in the twenty years 1877–96. During the first half of 1897 (January to June, inclusive) the rainfall was 13·950 inches on 113 days; during the second half (July to December, inclusive) 15·394 inches fell on 98 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 31; N.E., 44; E., 109; S.E., 76; S., 72; S.W., 109; W., 169; N.W., 91; Calms, 29.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, *6th July*, 1898.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1897.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—Opening with a brilliantly fine day, January, 1897, proved a cold, changeable month. Between the 3rd and the 10th, inclusive, there was an abundant rainfall with S.E. winds, owing to the presence of depressions over the Atlantic off the S.W. of Ireland. The weather was open at this time, but after the 14th frequent frosts occurred, and a good deal of snow fell from time to time, particularly in the N. of Scotland, where the weather was at times extremely severe.

In Dublin the arithmetical mean temperature (38·1°) was much below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 37·3°. In the thirty-two years ending with 1896, January was coldest in 1881 (M. T.=33·2°), and warmest in 1875 (M. T.=46·6°). In 1895 the M. T. was 35·4°, and in 1896 it was 44·3°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the northwestward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1897, proved an exception to this rule, the M. T. being 3·3° below that of December, 1896 (41·4°).

The mean height of the barometer was 29·918 inches, or 0·044 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·434 inches at 9 p.m. of the 1st, and fell to 29·284 inches at 7 30 a.m. of the 30th. The observed range of atmospheric pressure was, therefore, 1·150 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 37·3°, or 3·5° below the value for December, 1896. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the M. T. becomes 38·3°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 38·1°, compared with a twenty-five years' average of 41·4°. On the 3rd the thermometer in the screen rose to 51·3°—wind, S. to S.W.; on the 17th the temperature fell to 25·0°—wind, W. The minimum on the grass was 21·2°, also on the 17th.

The rainfall was 2·694 inches, distributed over 17 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, was above, while the rainy days were equal to, the average. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also, 4·258 inches fell—on, however, only 18 days. But the record rainfall for January was in 1895—namely, 5·711 inches on 24 days, or nearly eight times as much as the rainfall for January, 1896 (·720 inch).

In 1876 only ·406 inch was measured on but 9 days; and in 1880 the rainfall was only ·563 inch on but 8 days.

The atmosphere was foggy on the 5th, 10th, 11th, 12th, 15th, 16th, 17th, 18th, and 27th. High winds were noted on 11 days, reaching the force of a gale on 4 days—the 5th, 6th, 7th and 22nd.

Snow or sleet fell on the 16th, 22nd, 23rd, 25th, and 26th. Hail fell on the 15th, 20th, 22nd, 23rd, and 25th. Temperature exceeded 50° in the screen on only 2 days—the 2nd and 3rd; while it fell to or below 32° in the screen on 13 nights, compared with only 3 nights in 1896, 18 in 1895, 7 in 1894, 4 in 1893, 15 in 1892, 7 in 1891, 1 night in 1890, and 3 nights in 1889. The minima on the grass were 32°, or less, on 21 nights, compared with 8 nights in 1896, 29 in 1895, 17 in 1894, 16 in 1893, 25 in 1892, 21 in 1891, 15 in 1890, and 16 in 1889.

New Year's Day, 1897, was brilliantly fine—not a cloud showed in the sky from morning till night. Saturday, the 2nd, was less fair, but on the whole fine and mild, although at times cloudy.

Interesting from a meteorological point of view, the weather of the week ended Saturday, the 9th, was very unsettled and inclement. At the beginning of the period depressions were still passing northwards outside the Western Coasts of Ireland and Scotland, so that S. and S.W. winds prevailed, with rans and bright intervals alternately. Monday was fair and sunny in Dublin, although a heavy dash of rain occurred in the evening. Tuesday broke cold, damp, and foggy, and as the day advanced the wind became S.E. and freshened until at night it blew a gale with heavy rain. From that time to the close of the week, storm, gloom, and rain were paramount. This state of things was brought about by the gradual advance across Northern Europe south-westwards of an anticyclone, in which the barometer rose above 30·70 inches in Sweden on Friday morning; while, at the same time, deep depressions approached the S.W. of Ireland on Wednesday morning (barometer down to 28·99 inches at Valentia Island) and the mouth ot the English Channel on Friday morning. The north-easterly course of the system in each case was arrested by the high pressure area over Scandinavia. Gales from S.E. to E. prevailed, the sky remained densely clouded, and rain fell in large quantities, especially in the S.W. and S. of England and the S. and E. of Ireland. Temperature gave way considerably on Friday and Saturday, which were dull and cold in the extreme. In Dublin the mean height of the barometer was 29·708 inches, pressure ranging between 29·985 inches at 9 a.m. of Sunday (wind, S.) and 29·452 inches at 9 p.m. of Wednesday (wind, E.S.E.) The corrected mean temperature was 43·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 42·0°. On Sunday the screened thermometers rose to 51·3°. On Tuesday they fell to 33·1°. Rain fell daily to the total amount of 1·771 inches, ·579 inch being measured on Wednesday. The prevailing winds were S.S.W., S.E., and E.

Much finer and generally colder weather was experienced in the period ended Saturday, the 16th. Until Tuesday the distribution of atmospheric pressure remained much the same as it had

been during the previous week. Thus, an anticyclone was found over Scandinavia and the North of Russia, while the barometer was relatively low to the S.W. of our Islands. Gradients, however, were not at all so steep, and the S.E. gales accordingly subsided. Sunday was gloomy, damp, and finally wet and foggy in Dublin. Gloom and fog prevailed also on Monday. On Tuesday a new depression appeared off the coast of Kerry, renewing the strong S.E. winds and bringing a considerable fall of rain to the County Cork. A complete change now took place. The Scandinavian anticyclone moved away eastwards and partially dispersed, while a new area of high barometer advanced upon the N.W. of Ireland from the Atlantic. This system developed rapidly until on Thursday morning the barometer rose above 30·40 inches in the West of Ireland. Light to moderate N.E. winds resulted, and showers of hail and snow began to fall along the east coast of both Great Britain and Ireland. In Dublin the ground was covered with snow on Saturday morning, and calms and dense fogs prevailed. The mean height of the barometer at this station was 29·965 inches, pressure ranging between 29·544 inches at 9 a.m. of Sunday (wind, S.E.) and 30·380 inches at 9 a.m. of Thursday (wind, N.) The corrected mean temperature was 38·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 36·7°. On Monday the screened thermometers rose to 44·6°, on Saturday they fell to 29·1. The rainfall was ·097 inch on two days, ·076 inch being measured on Sunday. The prevalent winds were S.E. and afterwards N.W. A little hail fell on Friday, snow on Saturday.

During the week ended Saturday, the 23rd, cold, and at times very cold, weather prevailed and at its close snow lay thickly on the ground in most districts. On Sunday a very sharp frost occurred in Dublin, the thermometer falling to 25·0° in the screen and to 21·2° on the ground. A beautiful sunny, yet frosty, day followed. On Monday morning sharp frost was reported from England, while the cold relaxed in both Scotland and Ireland. The northern half of the British Isles now came under the influence of an arm of high atmospheric pressure, which stretched across the North Sea from Scandinavia. At the same time the barometer fell in France as depressions moved north-eastwards across the Peninsula and the Mediterranean. As a result, strong easterly winds set in on Tuesday night, accompanied by bitterly cold weather and showers of hail and sleet or snow. At 8 a.m. of Wednesday the barometer stood a little above 30·5 inches in the Hebrides. This system of high pressure afterwards moved southwards and dispersed, while a rapid reduction of pressure over Scandinavia took place and a well-marked cyclonic system travelled southwards across Central Europe during the last two days of the week. This disturbance brought northerly and north-easterly gales to the British and Irish coasts, as well as heavy falls of snow and hail. In Dublin a small blizzard was felt on Friday afternoon, and at 3 40 p.m. a bright flash of lightning was quickly followed by a loud peal of thunder. On Saturday snow lay in this city to the depth of about 2 inches. The mean atmospheric pressure was 30·092 inches, the barometer rising to 30·238 inches at 9 a.m. of Wednesday (wind, E.N.E.), and falling to 29·744 inches at 11 p.m. of Thursday (wind, W.N.W.). The corrected mean temperature was 35·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·8°. On Sunday the screened thermometers fell to 25·0°, on Wednesday they rose to 42·0°. The rainfall (which consisted chiefly of snow and hail) was equal to ·280 inch, ·218 inch being measured on Friday. There were three "rainy" days. The prevalent wind was N.E. Thunder and lightning occurred on Friday.

Cold, changeable weather prevailed throughout the week ended Saturday, the 30th. After Thursday, however, the frost broke up, and a considerable fall of rain occurred on Friday night and Saturday morning in connection with a large and deep atmospheric depression which crossed the British Islands towards the east at that time. Sunday opened with sharp frost, but a rapid thaw set in as the day advanced, and there were light showers of rain in the afternoon. These changes were due to the approach of a deep depression, which lay over the Shetlands on Monday morning, when the barometer was down to 28·95 inches at Sumburgh Head. The system subsequently crossed the North Sea in a south-easterly direction. It caused a violent snowstorm and severe frost in the North of Scotland—the melted snow yielded 1·5 inches of rain in the gauge at Wick on Tuesday morning. This represents some 18 inches of snow on the level. On Wednesday a high pressure system appeared off the West of Ireland and the weather moderated. A gradual rise of temperature now took place, spreading south-eastwards over the kingdom. On Friday the anticyclone in the West dispersed as a new and deep depression approached Ireland from the Atlantic. In front of the disturbance the wind for a while backed to S., and rain set in with a further increase of temperature—in Dublin, however, only to 42·8°. Early on Saturday the wind again veered to N.W. in the rear of the centre of low pressure, and temperature gave way—sleet and snow falling on the Dublin and Wicklow mountains. The mean barometric pressure was 29·854 inches, the observed range being from 30·303 inches at 9 p.m. of Wednesday (wind, W.N.W), to 29·284 inches at 7.30 a.m. of Saturday (wind, N.W.). The corrected mean temperature was 35·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 34·3°. On Sunday the screened thermometers fell to 25·9°, on Saturday they rose to 43·8°. The rainfall was ·261 inch on four days, ·190 inch being registered on Friday. The prevalent wind was W.N.W.

Sunday, the 31st, was fair to cloudy, overcast, and finally rainy.

In Dublin the rainfall up to January 31st, 1897, amounted to 2·694 inches on 17 days, compared with 5·711 inches on 24 days in 1895, only ·720 inch on 14 days in 1896, and with a twenty-five years' average (1865–1889) of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 3·660 inches on 20 days, compared with only ·485 inch on 7 days in 1896, and 6·190 inches on 19 days in 1895. The heaviest falls in 24 hours were ·580 inch on the 5th, and ·620 inch on the 6th.

At Cloneevin, Killiney, Co. Dublin, the rainfall was 3·080 inches on 20 days, ·650 inch being measured on the 6th. The average fall for the 12 years, 1885–1896, was 2·235 inches on 16·5 days. Snow fell on the 14th, 15th, and 22nd. In 1894, the rainfall was 3·260 inches on 23 days, in

1895 it was 5·930 inches on 24 days, in 1896 it was ·700 inch on 9 days. In 1891, only ·47 inch fell on, however, 11 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 19 days in January, the total measurement being 3·878 inches. On the 5th, ·560 inch was registered; on the 6th, ·520 inch; and on the 3rd, ·510 inch. At this climatological station the thermometer in the screen sank to 32° or lower on 10 nights. The highest temperature in the shade was 47·0° on the 7th; the lowest was 25·8° on the 24th. Snow fell on the 16th, 22nd, 24th, and 25th.

FEBRUARY.—Taken as a whole, this was one of the mildest Februaries on record in Dublin. There was scarcely any frost even on the ground, and the sky was often densely clouded. The first third of the month was gloomy and wet in Ireland, intensely cold in the North and North-east of Scotland, where the thermometer fell on the 4th to zero at Nairn and Lairg, and to —7° at Braemar. The minimum at Aberdeen at this time was 9°, whereas the thermometer rose at that place to 64° on the 22nd and to 61° on the 26th. Equatorial winds were prevalent during the greater part of the month.

In Dublin the mean temperature (46·0°) was 3·2° above the average (42·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 45·1°. In the thirty-two years ending with 1896, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1869 (M. T. = 46·7°).

The mean height of the barometer was 30·001 inches, or 0·146 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·569 inches at 9 p.m. of the 22nd, having fallen to 29·209 inches at 9 p.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·360 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·1°, or 11·5° above the value for February, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·50), the M. T. is 46·0°, compared with a twenty-five (1865–1889) years' average of 42·8°. On the 19th the thermometer in the screen rose to 59·7°—wind, S.W.; on the 1st the temperature fell to 35·0°—wind, E.S.E. The minimum on the grass was 29·6°, on the 28th

The rainfall was 1·395 inches, distributed over 16 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average number of rainy days was 17·2. The rainfall, therefore, and also the rainy days, were below the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. The rainfall in 1891 was much the smallest recorded in February for very many years. The record is probably unparalleled in Dublin—·042 inch on 2 days. Neither hail, nor sleet, nor snow fell.

The atmosphere was foggy on 7 days—namely, the 3rd, 4th, 5th, 10th, 12th, 15th, and 17th. The amount of cloud—73·6 per cent.—was much above the average—66 per cent. High winds were noted on 7 days, and reached the force of a gale on the 18th, 20th, 24th, 25th, and 26th. A lunar halo was seen on the 16th.

The temperature reached or exceeded 50° in the screen on 14 days, and it never once fell below 32°, compared with as many as 18 nights in 1895, and only 1 night in 1896. The minima on the grass were 32°, or less, on only 4 nights, compared with every night in 1895, and 10 nights in 1896. The thermometer never failed to rise to or above 40° in the screen during the daytime.

The weather was exceeding unsettled—cold, wet, gloomy, and foggy—during the greater part of the period ended Saturday, the 6th. But the most striking feature in the meteorology of the period was the occurrence of intense frost in the N. and N.E. of Scotland from the morning of the 1st to the evening of the 4th. This local area of cold was brought about by a combination of circumstances—namely, a country deeply covered with snow, a clear sky, and a tolerably calm atmosphere. The town of Nairn suffered most severely from the resulting chill—the minima in the screen there being 12°, 13°, 7°, 0°, 4°, and 26° respectively. This hyperborean cold had an extraordinary effect on the weather in England and Ireland, for it seemed to stop the Atlantic depressions in their passage north-eastwards—the result was gloom, fog, and downpours of rain or heavy falls of wet snow. The steepness of the thermometric gradients over Western Europe was extreme on Tuesday, the 2nd, when a warm S.W. air-current blew across France with gale force. At 8 a.m. of that day the thermometer read 52° at Lorient and Jersey, 51° in Paris, 37° in London, but 16° at Nairn and 17° at Wick. In the course of the day it rose to 56° in Paris, but did not exceed 38° in London. At 8 a.m. of Wednesday the reading at Nairn was 10°, at Nice 56°, or a difference of 46° F. The maximum at Nice on this day was 70°. On Tuesday a trough of low atmospheric pressure stretched from the south of Ireland eastwards to the Netherlands, and on Friday a well-defined cyclonic system was found over the English Channel. These systems caused heavy rains in France, Ireland, and England. In Dublin the barometer ranged between 29·209 inches at 9 p.m. of Monday (wind, E.S.E.), and 29·695 inches at 9 p.m. of Wednesday (wind, S.E.). On Monday the screened thermometers fell to 35·0°, on Thursday they rose to 49·5°. The rainfall was ·571 inch on six days, ·269 inch being measured on Tuesday. The prevailing winds were easterly.

A very decided advance in temperature was observed during the week ended Saturday, the 13th, the weather of which was of the south-westerly type—open, cloudy and damp. Between Monday and Friday a large area of low atmospheric pressure travelled slowly north-eastwards from the N.W. of Scotland to the N. of Scandinavia. From Wednesday a shallower depression was found over the S. and S.W. of Ireland. The latter disturbance equalised pressure, and so caused a temporary fall of temperature on Wednesday. This was followed by easterly and south-easterly breezes; gloom and fog succeeding on Friday, when a sharp frost visited the Scottish stations, the screened thermometer falling to 29° at Ardrossan, 28° at Stornoway, 26° at Leith, 25° at Wick, and

24° at Nairn. At the beginning of the week intense cold still held in the Baltic and Gulf of Bothnia—at Haparanda the minimum on Sunday was —24°, on Monday it was —27°. The corresponding values at Hernösand were —18° and —17°. At 8 a.m. of Tuesday the thermometer at this latter station stood 38° higher than at 8 a.m. of Monday. In Dublin the mean height of the barometer was 30·032 inches, pressure ranging between 29·841 inches at 9 a.m. of Tuesday (wind, W.) and 30·163 inches at 9 a.m. of Wednesday (wind, calm). The range of pressure was therefore small. The mean temperature was 45·2°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 44·8°. On Wednesday the screened thermometers fell to 36·0°; on Saturday they rose to 53·0°. Rain fell on 4 days to the amount of ·377 inch, ·240 inch being registered on Monday. The prevailing winds were westerly, but an easterly breeze blew from Wednesday evening to Friday at noon.

Weather of the south-westerly type—open, cloudy, and often damp—was in evidence throughout the week ended Saturday, the 20th, and temperature again showed a substantial advance, although a temporary chill occurred on the morning of Wednesday the 17th. At the beginning of the period very intense cold held over the North of Europe—at 8 a.m. of Sunday the thermometer read −17° F. at Haparanda on the Gulf of Bothnia; on Monday morning it marked −9° at Hernösand and −6° at Karlstad in Sweden. A change then took place, as a large and deep depression reached the N.W. of Norway from the westward, and a general thaw set in all over Scandinavia—the 8 a.m. temperatures at Karlstad for the rest of the week were 23°, 42°, 39°, 35°, and 35° respectively. The south-westerly current, which flowed over the British Islands at the periphery of the depression in the far north, brought with it unusual warmth, so that on Friday the thermometer rose almost to 60° in the screen in Dublin. It should also be mentioned that an anticyclone existed over France, Germany, and the southern parts of the British Isles from Monday, so that at times the S.W. winds were very dry and somewhat searching in character. This was notably the case early on Thursday morning and again on Saturday. At 9 a.m. of Thursday the relative humidity was only 68 per cent. in Dublin. On Saturday evening a heavy fall of rain occurred and there was a fresh S.W. to W. gale. The mean atmospheric pressure was 30·215 inches, the barometer rising to 30·543 inches at 9 a.m. of Tuesday (wind, S.W.), and falling to 29·883 inches at 8 p.m. of Saturday (wind, W.S.W.) The mean temperature was 47·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 45·9°. On Wednesday the screened thermometers fell to 37·1°, on Friday they rose to 59·7°. The rainfall was ·267 inch on three days, ·211 inch being measured on Saturday. The prevailing winds were S.W. and W. Gales occurred on Thursday and Saturday.

Stormy, open, cloudy weather was prevalent throughout the week ended Saturday, the 27th; but except in the north and west of Ireland the rainfall was not heavy. The distribution of atmospheric pressure over northern and western Europe was eminently calculated to produce westerly gales. Thus, an area of high atmospheric pressure, near the centre of which the barometer stood at 30·7 inches or upwards, stretched from the Bay of Biscay eastwards across France, while a constant succession of depressions swept north eastwards across the Norwegian Sea and Norway. At the very beginning of the period a well-marked secondary depression moved rapidly over the British Isles towards E.S.E., the centre reaching Holland at 8 a.m. of Sunday. This disturbance caused strong S.W. to N.W. gales, which were, however, of short duration. In its rear the barometer rose quickly, so that by 8 a.m. of Monday it reached 30·76 inches at Brest and Lorient. On this day a warm wave swept over our Islands, the maximal thermometric reading being 64° at Aberdeen. On Wednesday morning the barometric gradient was very steep—pressure ranging from 30·71 inches in Paris to 29·05 inches at Bodö, in Norway. Twenty-four hours later a new and deep depression had advanced to the neighbourhood of the Hebrides, so that south-westerly gales again sprang up in Ireland, Scotland, and parts of England. Heavy rain was reported from Valentia (·60 inch), Belmullet (·85 inch), and Stornoway (·50 inch). On Friday afternoon the wind moderated and temperature gave way. Saturday was a beautiful, sunny, spring-like day. In Dublin the mean height of the barometer was 30·255 inches, pressure ranging between 30·569 inches at 9 p.m. of Monday (wind, W. by S.) and 29·765 inches at 7 15 a.m. of Thursday (wind, S.W.). The mean temperature was 49·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 48·8°. On Thursday the screened thermometers rose to 58·6°, on Saturday they fell to 37·8°. The rainfall was ·121 inch on two days, ·109 inch being registered on Wednesday.

Sunday, the 28th, was dull, threatening, and showery in the day-time. In the evening the sky cleared and temperature fell.

In Dublin the rainfall up to February 28th, 1897, amounted to 4·089 inches on 33 days compared with only 1·588 inches on 24 days in 1896, 6·336 inches on 33 days in 1895, 4·741 inches on 39 days in 1894, 4·908 inches on 41 days in 1893, 3·817 inches on 39 days in 1892, ·714 inch on 16 days in 1891, and a twenty-five years' (1865–1889) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, 1·530 inches of rain fell in February on 17 days. The heaviest fall in 24 hours was ·190 inch on the 3rd. The total fall to February 28th inclusive was 5·190 inches on 37 days, compared with only 1·940 inches on but 17 days in the corresponding period of 1896.

The rainfall in February at Cloneevin, Killiney, Co. Dublin, amounted to 1·23 inches on 18 days. The average rainfall for February during 12 years (1885-96) at this station is 1·461 inches on 12·5 days. The greatest rainfall in 24 hours was ·18 inch on the 8th. Since January 1, the rainfall was 4·31 inches on 38 days, compared with 1·64 inches on 19 days in the same period in 1896.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 15 days in February, the total measurement being 1·718 inches. On the 4th, ·281 inch was registered. At this climatological station there was no frost in the screen during the month, the minimum being 33·4° on the 1st. The maximal temperature was 56·4° on the 25th. On 16 days the thermometer rose above 50° in the screen. Since January 1 the rainfall has been 5·59 inches on 34 days.

MARCH.—Like March, 1896, this was a changeable, wild and rainy month, with a cyclonic distribution of pressure. During the first half temperature was low. A warm spell followed, but temperature again fell briskly on Sunday, the 28th, and the month closed cold and ungenial. Compared with February, the mean temperature showed a falling off of one degree Fahr. Notwithstanding, the progress of vegetation was very rapid, and on the last day the trees presented quite a vernal appearance.

In Dublin the arithmetical mean temperature (45·3°) was about two degrees above the average (43·1°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·8°. In the thirty-one years ending with 1896, March was coldest in 1867 and 1883 (M. T.=39·0°), and warmest in 1893 (M. T.=48·1°), and in 1868 (M. T.=47·3°). In 1896 the M. T. was 46·1°.

The mean height of the barometer was 29·543 inches, or 0·373 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·081 inches at 9 a.m. of the 7th, and fell to 28·771 inches at 11 p.m. of the 2nd. The observed range of atmospheric pressure was, therefore, 1·310 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·8°, or 1·3° below the value for February, 1897. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the M. T. becomes 45·1°. The arithmetical mean of the maximal and minimal readings was 45·3°, compared with a twenty-five years' average of 43·1°. On the 21st the thermometer in the screen rose to 61·6°—wind, S.W.; on the 30th the temperature fell to 29·0°—wind, calm. The minimum on the grass was 26·9° also on the 30th.

The rainfall was 2·980 inches, distributed over 24 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, and also the rainy days, were considerably above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1896, 3·310 inches fell on 23 days.

The atmosphere was more or less foggy in the city on 2 days—viz., the 21st and 30th. High winds were noted on 19 days, reaching the force of a gale on nine occasions—the 4th, 11th, 12th, 14th, 17th, 19th, 22nd, 24th, and 26th. Snow or sleet occurred on the 1st, 3rd, 4th, 9th, 12th, and 14th; and hail fell on the 1st, 3rd, 5th, 10th, 12th, 28th, and 29th. The temperature exceeded 50° in the screen on 14 days, compared with 21 days in 1896, 13 in 1895, 22 in 1894, 26 in 1893, only 7 in 1892, 9 in 1891, and 19 in 1890. It only once fell below 32° in the screen. In March, 1892, frost had occurred in the shade on as many as 16 nights. The minima on the grass were 32°, or less, on 9 nights, compared with 8 nights in 1896, 10 in 1895, 12 each in 1894 and 1893, 25 in 1892, 20 in 1891, and 16 in 1890. The thermometer once rose to 60° in the screen, but never failed to reach 40°. In March, 1892, the thermometer did not rise to 40° in the screen on 9 days. Solar halos were seen on the 9th, 11th, 25th, 27th, and 30th. Lunar halos appeared on the 8th, 13th, and 18th. Thunder was heard on the 17th, lightning was seen on the 1st and 3rd.

Cyclonic conditions, and very rough, cold, changeable weather held over North-western Europe throughout the period ended Saturday, the 6th. On Sunday, February 28, an atmospheric depression had advanced quickly from S.W., passing along the western shores of Ireland and Scotland and causing squally, showery weather. At 8 a.m. of Monday, the 1st, this disturbance was central off the N. of Scotland. Fair intervals and passing showers of cold rain or sleet and hail prevailed during the day, and at night snow fell in the W. of Ireland. Early on Tuesday morning a dense sheet of cirro-stratus cloud overspread the sky as a much larger and deeper depression approached the British Isles from S.W. The centre of this cyclonic system travelled across Wales and Central England during the following night, and was found over Yorkshire and Lincolnshire on Wednesday morning, when the barometer was down to 28·54 inches at York and 28·52 inches at Spurn Head. Violent S.W. to W. gales blew in France, Belgium, and the S. of England. Hail and sleet squalls, accompanied by thunder and lightning in some districts, swept across Ireland and Scotland. On Thursday morning the disturbance was found over Denmark, where it was rapidly filling up; but another deep depression had already reached the N.W. of Ireland from the Atlantic. A renewal of the gales and showers resulted from the approach of this new disturbance, and thunderstorms again occurred in several places. On Friday the weather began to moderate and Saturday was a fine, dry, and sunny day. In Dublin barometric pressure increased from 28·771 inches at 11 p.m. of Tuesday (wind, W.S.W.) to 30·045 inches at 9 p.m. of Saturday (wind, N.W.). On Tuesday the screened thermometers fell to 33·9°, on Saturday they rose to 50·8°. The rainfall was ·600 inch on five days, ·351 inch being measured on Tuesday. W. and W.S.W. winds prevailed. Lightning was seen on Monday and Wednesday.

The week ending Saturday, March 13, was very broken—cold, rainy, and stormy. Only Sunday was fine throughout, but on several days there were fine intervals. A violent rainstorm occurred on Thursday evening, and much snow fell on the Dublin and Wicklow mountains during the week. Even on the lowlands sleet and hail were often mingled with the rain. The persistent presence of an anticyclone over Scandinavia and Lapland, with intense cold in those regions, contrasted remarkably with the disturbed state of the atmosphere and the unstable temperature in the British Isles and over France. On Sunday morning, indeed, the barometer stood uniformly rather high, but by Monday morning a V-shaped depression had advanced over Ireland, throwing the weather into a wet and dull condition. At night a lunar halo was seen, and this was followed by a solar halo on Tuesday forenoon. The day was mild, but towards evening a sudden chill spread across Ireland from W. to E., causing heavy rain and sleet, while thunder and lightning occurred at Belmullet. At 8 a.m. of Wednesday the barometer ranged from 30·55 inches at Hernösand (Sweden) to 29·40 inches at Wick. Showers of cold rain and hail were very prevalent on this day, and thunder and lightning were reported from the S.E. of England. On Thursday evening the most serious depression of the week advanced to the Bristol Channel, thence passing

northwards to the Irish Sea. It caused a downpour of rain and sleet in many districts. Saturday was chiefly fine, but at night a lunar halo and a falling barometer heralded the approach of a new disturbance from the Atlantic. In Dublin the mean atmospheric pressure for the week was 29·723 inches, the barometer falling from 30·081 inches at 9 a.m. of Sunday (wind, N.W.) to 29·328 inches at 11 p.m. of Thursday (wind, E.). The corrected mean temperature was 42·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 41·2°. The shade thermometers fell to 33·0° on Sunday and rose to 53·1° on Tuesday. The prevailing winds were S.S.E. and W. Rain fell daily to the amount of 1·277 inches, ·735 inch being registered on Thursday.

Another spell of cyclonic conditions and unsettled, squally, showery weather signalised the week ended Saturday, the 20th. Deep atmospheric depressions appeared in the S.W. at the beginning and in the N.W. towards the close of the period. In the extreme N.E. (over Northern Russia and Lapland) the barometer stood relatively high and the cold was at times very intense—on Thursday, for example, the thermometer fell to—20° at Haparanda, on the Gulf of Bothnia, and the 8 a.m. temperature at that station was—12°, or 44° below the freezing point. On Sunday morning a large depression was central off the S.W. of Kerry. Thence the system travelled in a circuitous route to Wales, over which country it was found on Monday morning. At that time the weather was dull, cold, and wet in Dublin, with a light N.E. wind. The disturbance subsequently travelled north-north-westwards to the North Channel and the wind backed in Ireland to W. and S.W. On Tuesday a new depression passed in a northerly direction along the west coast of Ireland. The reduction of pressure went on until 2 p.m. of Wednesday, when the barometer read only 28·75 inches at Malin Head. On and after Thursday there was a brisk recovery of pressure in the S.W. and S., so that on Saturday morning the barometer reached 30·07 inches in Dublin. During the disturbed period up to Friday, squalls and showers accompanied by thunder and lightning were prevalent in Ireland and England. Hail and sleet or snow fell in Scotland on Monday. In Dublin the mean height of the barometer was 29·440 inches, the range of pressure being from 29·003 inches at 9 a.m. of Tuesday (wind, S.) to 30·067 inches at 7 a.m. of Saturday (wind, E., light). The corrected mean temperature was 46·1°. The mean dry bulb reading at 9 am. and 9 p.m. was 45·1°. On Sunday the screened thermometers fell to 36·9°; on Saturday they rose to 56·9°. Rain fell on 4 days to the amount of ·392 inch, ·239 inch being measured on Monday. Thunder was heard on Wednesday.

A continuance of cyclonic conditions is to be noted in the week ended Saturday, the 27th, but there was a great advance in temperature, and the rainfalls, although frequent, were not heavy. A succession of deep depressions passed northwards or north-eastwards along the western coasts of Ireland and Scotland at short intervals, causing fresh S.W. to W. gales and showers in most exposed districts. In the extreme north of Europe the weather remained very cold throughout, although at Haparanda the thermometer on Wednesday morning stood 26° higher than it had done 24 hours previously, at +22° compared with—4°. Sunday was very mild in Ireland and England—the thermometer rose in the shade to 61° at Parsonstown, Oxford, and in London; to 62° in Dublin and at Loughborough; and to 64° at Cambridge. In Dublin S.W. or W. gales occurred on Monday, Wednesday, and Friday—the force of the wind being especially great on Wednesday. The high temperature and frequent showers gave vegetation so great an impetus that at the close of the week even forest trees were quickly assuming a leafy covering—in fact vegetation appeared to be a month in advance. On Saturday temperature showed a tendency to give way. In Dublin the mean height of the barometer was 29·713 inches, pressure ranging from 30·034 inches at 9 a.m. of Sunday (wind, calm) to 29·210 inches at 7 p.m. of Saturday (wind, W.). The corrected mean temperature was 52·8°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 50·7°. On Sunday the screened thermometers rose to 61·6°; on Saturday they fell to 45·9°. The rainfall was ·270 inch on six days, ·085 inch being measured on Friday and ·083 inch on Saturday. The prevailing winds were S.W. and W.

On Sunday, the 28th, a brisk and sudden fall of temperature occurred in the forenoon, and showers of cold rain and hail fell in the afternoon. The cold spell thus ushered in lasted to the end of the month, a very sharp frost prevailing on the night of the 29th–30th, when the screened thermometer fell to 25° at Loughborough and Shields, 26° at Parsonstown and various British stations, 27° at Oxford, Leith, and Aberdeen, and 29° in London and Dublin. At this time the centre of a large and deep atmospheric depression (28·70 inches and less) lay over the South of Scandinavia, a cold northerly current of air being in this way drawn over the British Isles.

The rainfall in Dublin during the three months ending March 31st amounted to 7·069 inches on 57 days, compared with 4·898 inches on 47 days in 1896, 9·084 inches on 52 days in 1895, 6·028 inches on 53 days in 1894, 5·196 inches on 49 days in 1893, 4·808 inches on 48 days in 1892, only 1·650 inches on but 32 days in 1891, 7·470 inches on 45 days in 1890, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, 3·755 inches of rain fell on 24 days during March; and the total rainfall since January 1, 1897, equals 8·945 inches on 61 days. The corresponding figures for 1896 are 2·796 inches on 25 days, the total rainfall since January 1 having been 4·736 inches on 42 days. The maximal fall in 24 hours was ·940 inch on the 2nd.

The rainfall in March at Cloneevin, Killiney, Co. Dublin, was 3·28 inches on 23 days, compared with 2·61 inches on 23 days in 1896, 3·29 inches on 21 days in 1895, 1·11 inches on 14 days in 1894, ·26 inch on 9 days in 1893, ·98 inch on 10 days in 1892, and a twelve years' (1885–96) average of 1·873 inches on 15·2 days. The maximum in the 12 years was 3·59 inches in 1888, the minimum was ·26 inch in 1893. At this station the total rainfall since January 1, was 7·59 inches on 61 days, compared with a fall of 4·25 inches on 42 days in the first quarter of 1896, 9·68 inches on 52 days, in that of 1895, and 5·56 inches on 55 days in that of 1894. On the 11th, ·64 inch fell.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in March was 4·490 inches on 23 days, 1·017 inches being registered on the 2nd, and ·748 inch on the 11th. The highest shade temperature at this climatological station was 59·1° on the 21st, the lowest was 28·9° on the 30th. Since January 1st, 10·086 inches of rain had fallen at the hospital on 57 days.

April.—A cold, changeable, rainy month. In Dublin rain fell on as many as 22 days, including snow or sleet on 2 and hail on 5. The barometer was very unsteady, and the distribution of atmospheric pressure was for the most part cyclonic. A finer and drier period, associated with a tolerably high barometer and easterly winds, set in on the 21st and lasted for a few days, but winter lingered to the close in Ireland, though in England some genial warmth was enjoyed in the daytime after the 25th. The amount of cloud was, in Dublin, 12 per cent. in excess of what it had been in April, 1896.

In Dublin the arithmetical mean temperature (45·9°) was 1·8° below the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 45·0°. In the thirty-two years ending with 1896, April was coldest in 1879 (the cold year) (M. T.=44·5°), and warmest in 1893 (M. T.=51·4°). The month of April, 1893, was the warmest for at least 50 years, yet it was only half a degree warmer than April, 1896, which was 5° warmer than the month now under discussion.

The mean height of the barometer was 29·818 inches, or 0·032 inch below the average value for April—namely, 29·850 inches. The mercury rose to 30·289 inches at 9 a.m. of the 10th, and fell to 29·281 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·008 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 45·0°, or only 1·2° above the value for March, 1897. Using the formula, *Mean Temp.* $=Min.+(max.-min.\times\cdot476)$, the value is 45·6°, or 1·8° below the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 45·9°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 28th the thermometer in the screen rose to 59·7°—wind, N.W.; on the 2nd the temperature fell to 29·9°—wind, N.W. The minimum on the grass was 28·0° also on the 2nd.

The rainfall was 2·485 inches, distributed over 22 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall and the rainy days, therefore, were considerably above the average. In 1877 the rain fall in April was very large—4·707 inches on 21 days; in 1882 also, 3·526 inches fell on 20 days, and in 1894, 3·123 inches on 20 days. On the other hand, in 1873, only ·498 inch was measured on 8 days; in 1870, only ·838 inch fell, also on 8 days: and in 1896, only ·883 inch on 16 days.

Fog was observed on the 21st. High winds were noted on 16 days, reaching the force of a gale on the 3rd and 16th. Hail fell on the 1st, 14th, 15th, 19th, and 30th. The temperature rose to 50° in the screen on 22 days. It never rose to 60°, and once fell to 32° in the screen, and on 4 nights below 32° on the grass. The mean lowest temperature on the grass was 37·7°, compared with 40·6° in 1896, 37·8° in 1895, 40·0° in 1894, 38·2° in 1893, 32·4° in 1892, 34·1° in 1891 and 1890, 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887. Solar halos were seen on the 8th and 16th, lunar halos on the 10th and 15th. Snow or sleet fell on the 1st and 14th.

The month opened with very unsettled, winterly weather. On the morning of Thursday, the 1st, a deep depression (28·84 inches at Jersey) was found to have travelled quickly eastwards up the English Channel, its centre at 8 a.m. being midway between the Isle of Wight and Cherbourg. Heavy rain and warm S.W. winds prevailed in France, while cold N.E. winds and sleet were experienced in England, the weather being still colder and drier in Scotland and Ireland. In the afternoon snow and hail fell heavily in Dublin. Another sharp frost followed at night. Friday was fair and cold. A new disturbance in the S.W. brought gloom, cold rain, and a piercing S.E. wind to the Irish stations on Saturday. The rainfall of these first three days amounted to ·199 inch, ·130 inch being registered on the 3rd, none on the 2nd, and ·069 inch on the 1st.

Another period of cold, unsettled, rainy weather has to be recorded in the week ended Saturday, the 10th. A number of complex but not very deep atmospheric depressions drifted slowly across Western Europe in an easterly or south-easterly direction. The centres of these systems usually passed across Wales, the S.W. of England and Brittany, and in those districts the rainfall was exceptionally heavy. Sunday was cold and wet at first, then dull and dreary on the east coast of Ireland, though fair at Holyhead. Rain fell heavily on Monday and Tuesday nights. Wednesday was a raw, cold day in Dublin, and thunder and lightning occurred in London with sleet and rain. Thursday morning was frosty; a solar halo appeared in the forenoon, and the afternoon was wet. On Friday also dull rainy weather prevailed, as a V-shaped depression passed eastward across Ireland. Between 5 and 6 p.m. the sky darkened and a sudden shift of wind from S.W. to N. took place with close rain. The sky cleared at night and temperature again became very low. Saturday proved a beautiful springlike day—a ridge of high barometer having advanced over Ireland in the rear of Friday's V-shaped depression. In Dublin the mean height of the barometer was 29·882 inches, pressure ranging between 29·564 inches at 9 a.m. of Wednesday (wind W.N.W.) and 30·289 inches at 9 a.m. of Saturday (wind N.N.W.). The corrected mean temperature was 43·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 42·5°. On Friday the screened thermometers rose to 54·1°; on Thursday they fell to 33·8°. The wind was variable—chiefly south-easterly. Rain fell on six days to the amount of ·757 inch ·259 inch being registered on Tuesday.

Comparatively fine and springlike in parts of England—particularly the South and South-east—the weather during the week ended Saturday the 17th remained extremely broken and inclement in Ireland, the South-west of England, Wales and Scotland. A large anticyclone was found lying over Northern Europe up to and including Thursday, but in this period areas of low pressure were passing

in rapid succession either northwards or north-eastwards along the western shores of Ireland and Scotland. Hence the prevalent strong southerly to westerly winds and frequent showers. Early on Wednesday morning the wind veered to W.N.W. in Ireland, and a bitterly cold day followed, showers of hail, sleet and snow falling at frequent intervals. At night there was clear moonlight and temperature was very low—37·9° at 9 p.m. Thunder and lightning occurred over Central England on this day. The two succeeding days were changeable, squally and showery. A brief spell of fair, dry weather was enjoyed in the east of Ireland on the afternoon of Good Friday, but thunderstorms occurred in England. A sheet of cirro-stratus, in which a solar halo was seen at first, overspread the sky on Friday evening. Saturday was wet and windy but mild at first, then showery, and finally clear and cold as well as dry. In Dublin the mean height of the barometer was 29·732 inches, pressure ranging between 29·323 inches at 9 p.m. of Tuesday (wind S.S.W.), and 30·043 inches at 9 p.m. of Thursday (wind W.S.W.). The corrected mean temperature was 46·5°. The mean dry bulb temperature was 45·8°. On Saturday the screened thermometers rose to 56·1°; on Thursday they sank to 37·1°. Rain fell daily to the total amount of ·826 inch, ·209 inch being measured on Friday. The wind was first south-easterly, then westerly.

The most noteworthy feature in the weather of the week ended Saturday the 24th was the cessation of the rainfall after Wednesday, and the substitution of strong easterly (or polar) winds, dry and searching in character, for the westerly (or equatorial) winds which had so long prevailed. On Easter Day, April 18, a sharply-defined cyclone lay over Denmark, the station Fanö reporting a barometric reading of 29·20 inches at 8 a.m., whereas atmospheric pressure reached 30·16 inches at Valentia Island, Kerry. Fresh N.W. winds blew all over the British Islands, but the weather, although cool, was chiefly dry. On Monday a new disturbance advanced over Ireland, causing a wet afternoon. At 6 p.m. a heavy hail shower passed across Dublin and a brisk fall of temperature took place. Brilliant rainbows were seen in the evening. On Tuesday yet another depression approached Ireland, where rain fell heavily in the afternoon. This system apparently travelled away southwards as an area of high barometer developed over Scotland and the Norwegian Sea. With this re-adjustment of atmospheric pressure came a spell of strong, dry, cold easterly winds and much bright sunshine. As is usual in such a polar current, the atmosphere was very hazy—indeed, on Wednesday thick vapour fog prevailed for some time. On Friday a large depression was found over the Peninsula, moving north-eastwards to France and Central Europe. The effect was to increase the force of the easterly wind and to break up the fine weather in the extreme S. and S.E. In Dublin the mean height of the barometer was 29·917 inches, pressure ranging from 29·571 inches at 9 p.m. of Tuesday (wind, S.E.) to 30·200 inches at 9 p.m. of Thursday (wind, E.) The corrected mean temperature was 46·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·2°. On Sunday the screened thermometers rose to 55·0°; on Tuesday they sank to 38·7°. The rainfall was ·553 inch, ·421 inch being registered on Tuesday. The prevailing winds were at first S.W., then E.

Comparatively favourable and springlike weather occurred in the closing period (25th-30th). In Ireland there was very little warmth, but over the south and south-east of England the daily maxima were considerably above 60° on and after Monday. At the beginning an area of high barometer held over Northern Europe, while depressions were found over the Bay of Biscay and the Peninsula, as well as in the Mediterranean Basin. Hence easterly winds, low temperatures, and hazy but dry weather held in the British Islands and Central Europe. Tuesday morning broke dull and rainy in Dublin but the afternoon proved fair. In the evening a severe thunderstorm with heavy rain and hail passed across parts of London—large quantities of hail falling in and about Streatham and Tooting. On Wednesday also electrical disturbances took place in various parts of both France and England in connection with a number of shallow atmospheric depressions which slowly approached from S.W. On Thursday a more decided depression appeared in the N.W., causing rain at first and afterwards cold showers and hail on Friday. During the ensuing night the thermometers sank to 39·0° in the screen, and to 35·9° on the grass in Dublin. In Dublin the barometer rose to 30·066 inches at 9 p.m. of Wednesday (wind, W.), and sank to 29·701 inches at 9 a.m. of Friday (wind, W.N.W.). On Wednesday the screened thermometers both rose to 59·7° and fell to 42·7°. The rainfall was ·150 inch on four days, ·060 inch falling on Thursday. The prevalent winds were E. and W.N.W.

The rainfall in Dublin during the four months ending April 30th amounted to 9·554 inches on 79 days, compared with 5·781 inches on 63 days in 1896, 10·233 inches on 65 days in 1895, 9·151 inches on 73 days in 1894, 6·242 inches on 56 days in 1893, 5·922 inches on 61 days in 1892, only 3·203 inches on 46 days in 1891, 9·045 inches on 59 days in 1890, and a twenty-five years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 4·135 inches on 19 days. The heaviest falls in 24 hours were 1·130 inches on the 12th, and ·650 inch on the 6th. The total rainfall in 1897, up to April 30, was 13·080 inches on 80 days, compared with 5·686 inches on 50 days in 1896, 12·570 inches on 54 days in 1895, 12·456 inches on 70 days in 1894, and 8·530 inches on 54 days in 1893.

At Cloneevin, Killiney, Co. Dublin, 2·77 inches of rain fell on 22 days. The maximal fall in 24 hours was ·52 inch on the 5th. The average rainfall in April of the twelve years, 1885–1896, was 1·648 inches on 13·2 days. Since January 1, 1897, 10·36 inches of rain fell at this station on 83 days, compared with 5·27 inches on 55 days in 1896, 11·28 inches on 66 days in 1895, 9·09 inches on 74 days in 1894, and 6·94 inches on 57 days in 1893.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 3·406 inches on 19 days. On the 5th, ·690 inch was measured; on the 12th, ·630 inch; and on the 20th, ·541 inch. The maximal temperature in the shade was 58·8° on the 17th. The minimal temperature in the screen was 30·1° on the 2nd. The thermometer in the screen fell to or below 32° on two days—the 2nd and 3rd. At this climatological station, 13·492 inches of rain had fallen on 76 days since January 1, 1897.

MAY.—A cold, rather dry month—very showery at the beginning and close, fine and bright in the intervening period, with absolute drought from the 12th to the 24th inclusive, partial drought; commencing on the 9th. The prevailing winds were from polar quarters—N.W., N.E., and E. The rainfall was only 56 per cent. of the average for May.

In Dublin the arithmetical mean temperature (50·9°) was decidedly below the average (52·0°) the mean dry bulb readings at 9 a.m. and 9 p.m. were 50·5°. In the thirty-two years ending with 1896, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1894 the M. T. was 49·2°; in 1895 it was 54·3°, and in 1896, 55·2°.

The mean height of the barometer was 29·976 inches, or 0·013 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·456 inches at 9 a.m. of the 16th, and fell to 29·217 inches at 7 p.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1·239 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 50·5°, or 5·5° above the value for April, 1897 (45·0°). Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the value was 50·5°, or 1·1° below the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 50·9°, compared with a twenty-five years' average of 52·0°. On the 16th the thermometer in the screen rose to 63·6°—wind, E.N.E.; on the 6th the temperature fell to 36·2°—wind, N.W. The minimum on the grass was 33·8° on the 6th.

The rainfall amounted to 1·139 inches, distributed over 14 days. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall, and—to a less extent—the rainy days, were below the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days.

A solar halo were seen on the 24th. High winds were noted on 12 days, attaining the force of a gale (from W.S.W.) on the 4th only. The atmosphere was slightly foggy on the 20th. Hail fell on the 3rd, 5th, 11th, 12th, and 26th.

During the month the thermometer did not fall below 32° in the screen or on the grass. The mean minimal temperature on the grass was 40·9°, compared with 43·1° in 1896; 41·8° in 1895, 37·6° in 1894, 45·6° in 1893, 41·3° in 1892, 37·7° in 1891, 42·2° in 1890, 42·4° in 1889, 37·5° in 1888, and 37·9° in 1887.

May Day was fine and dry.

The week ended Saturday, the 8th, proved a very changeable showery period; also extremely cold for the time of year until Friday, when the atmosphere became mild and damp, but genial. There was again a cyclonic distribution of barometric pressure in the N.W. and N., while relatively high pressures were found over the Bay of Biscay, France, and Germany. Hence strong winds from westerly (S.W., W., and N.W.) points blew over the British Islands, accompanied by frequent showers of cold rain and hail in the day time, and by clear, very sharp nights. Particularly heavy hail-showers passed over Dublin on Monday and Wednesday. Thunderstorms occurred at Stornoway on Tuesday, Oxford on Wednesday, and Aberdeen on Thursday. On Friday a very considerable increase of temperature took place, and the air became damp and the sky overcast, as some new depressions approached the West of Scotland from the Atlantic. The change was attended by a rather heavy rainfall in Ireland. At the beginning of the week the planet Mercury was well seen after sunset in the north-western sky—on Monday evening the crescent moon and this planet were seen in conjunction. In Dublin the mean height of the barometer was 29·976 inches, pressure ranging between 29·678 inches, at 9 a.m. of Sunday (wind, W. by S.), and 30·158 inches, at 9 p.m. of Thursday and Saturday (wind, W.N.W. and N.W.). The corrected mean temperature was 48·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·0°. On Saturday the thermometer rose to 59·9° in the shade, on Thursday it sank to 36·2°. Rainfall amounted to ·537 inch on seven days, ·266 inch being registered on Thursday. The prevailing winds were W.S.W. and W.N.W.

The "cold wave of May" was very typically represented by the weather of the week ended Saturday, the 15th, which up to Friday more resembled a period in February or March than the second week in May. Parching northerly winds of great strength, clouded skies, and particularly low night temperatures prevailed. Along the east coast of Great Britain sleet or snow and hail fell frequently. In France and Germany night frosts of much intensity proved very injurious to vegetation. During the first four days a cyclonic system hovered over the south of Norway and Denmark, while an area of high atmospheric pressure lay off the west of Ireland. Northerly winds and low temperatures were in consequence prevalent throughout the British Isles—a cold wave passing quickly southwards from the Shetlands to the Mediterranean. At 8 a.m. of Monday the thermometer read 34° at Sumburgh Head in the Shetlands, where snow was falling. Tuesday and Wednesday were extremely cold days, and there were slight hail showers in and near Dublin. At inland stations in England, France and Germany, at this time, the thermometer fell at night to or below 32° even in the screen. The anticyclone moved south eastwards on Thursday and was afterwards found over the S. of England and France. The sky remained densely clouded until noon on Saturday, when the clouds dispersed and a sunny afternoon followed. In Dublin the mean height of the barometer was 30·254 inches, the pressure ranging between 30·046 inches at 9 p.m. of Monday (wind, N.N.W.), and 30·441 inches at 9 p.m. of Saturday (wind, E.S.E.). The corrected mean temperature was 48·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·2°. On Tuesday the screened thermometers fell to 37·0°, on Saturday they rose to 58·9°. The prevailing wind was N.N.W. The rainfall was only ·001 inch on Tuesday (melted hail). On Saturday morning the thermometer read 68° at Haparanda, within the Arctic Circle, and only 38° at Munich.

An uninterrupted spell of anticyclonic weather has to be recorded in the week ended Saturday, the 22nd. Atmospheric pressure was highest on Sunday, when the barometer read 30·65 inches at Christiansund, on the west coast of Norway. It afterwards gave way intermittently, falling below 30 inches very generally on Saturday. Over Spain, the Mediterranean, and Central Europe at large several shallow depressions were found, and the weather was less settled than in the North of Europe and the British Isles. Owing to the distribution of atmospheric pressure which has just been described, north-easterly winds prevailed and temperature ruled low at night. At stations also on the east coasts of both Great Britain and Ireland the weather was cool even by day. This was especially so at Shields, where in consequence of the prevalence of cloud the thermometer did not rise above 49° from Monday evening to Friday. Inland, however, the heating power of an almost unclouded sun was well marked, London in particular feeling its effect, so that the maxima there were 67°, 75°, 76°, 69°, 73°, and 68° up to Saturday. The cloud canopy which kept the N.E. of England so chilly on Tuesday, Wednesday, and Thursday, extended to the neighbourhood of Dublin on the mornings of Tuesday and Thursday, but by noon in each case the sky had cleared. At times the atmosphere was very hazy, as is usual in anticyclonic easterly winds. In Dublin the mean height of the barometer was 30·183 inches, pressure ranging from 30·456 inches at 9 a.m. of Sunday (wind, E.N.E.), to 29·881 inches at 9 p.m. of Saturday (wind, S.E.). The corrected mean temperature was 53·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·2°. On Sunday the screened thermometers rose to 63·6°, on Friday they sank to 43·0°. No rain fell. The prevailing wind was N.E. At the Ordnance Survey Office, Phœnix Park, 89·1 hours of bright sunshine were recorded this week.

The week ended Saturday, the 29th, saw the disappearance of the anticyclone which had so long ruled the weather in the N.W. of Europe, and the substitution for it of low pressure areas and their accompanying unsettled, showery conditions. During Sunday and Monday bright, cool, dry weather and north-easterly winds prevailed. On Monday afternoon cirrus cloud overspread the sky from N.W., and a partial solar halo was seen in it at 6.30 p.m. This was the beginning of the change. The barometer began to fall decidedly in all districts, the change being briskest in the north, so that by Tuesday morning a well-defined V-shaped depression had formed over Scotland and the N.W. of England. In the afternoon a secondary disturbance advanced eastwards across Ireland, causing a very general though not heavy fall of rain. This disturbance was found over the S.W. of England on Wednesday morning, when the primary depression was still over Scotland with barometer readings below 29·40 inches. A more rapid fall of the barometer in the S.W. led to the formation of a cyclonic system over the south of Ireland and St. George's Channel by Thursday morning. The weather in consequence became more and more unsettled, with a tendency to thundershowers in many places. On Friday morning areas of high atmospheric pressure existed both in Lapland and over the Peninsula, while depressions covered Ireland, England, and Central Europe. In the afternoon heavy thundershowers occurred in Ireland. Saturday was a breezy, showery day: at 8 a.m. the barometer was down to 29·05 inches at Stornoway. In Dublin the mean height of the barometer was 29·579 inches, the range being from 30·037 inches at 9 a.m. of Monday (wind, N.N.E.), to 29·217 inches at 7 p.m. of Friday (wind, S.W.). The corrected mean temperature was 51·5°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 51·7°. The screened thermometers fell to 40·8° on Friday, and rose to 61·6° on Saturday. Rain fell on the last five days of the week to the amount of ·396 inch, ·227 inch being measured on Friday. The wind was variable.

The last two days of the month were changeable, showery and squally, but not unfavourable.

The rainfall in Dublin during the five months ending May 31st amounted to 10·693 inches on 93 days, compared with 5·971 inches on 70 days in 1896, 10·410 inches on 68 days in 1895, 12·709 inches on 90 days in 1894, 7·908 inches on 66 days in 1893, 10·099 inches on 80 days in 1892, only 5·995 inches on 63 days in 1891, 11·483 inches on 76 days in 1890, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a twenty-five years' average of 10·496 inches on 81·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·040 inches, distributed over 10 days, ·300 inch falling on the 31st and ·210 inch on the 6th. The total fall since January 1st, 1897, equals 14·120 inches on 90 days, compared with 5·716 inches on 52 days in 1896, 12.845 inches on 58 days in 1895, 15·696 inches on 85 days in 1894, and 9·565 inches on 65 days in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, was 0·850 inch on 10 days—0·26 inch falling on the 26th. At this station the average rainfall in May in the twelve years, 1885–1896, was 2·061 inches on 13 days. May, 1896, was a very dry month, only 0·06 inch falling on 2 days. Absolute drought prevailed from the 8th to the 24th, both inclusive. Since January 1, 1897, 11·21 inches of rain have fallen on 93 days at Cloneevin.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in May was 0·802 inch on 11 days, ·188 inch being measured on the 30th. Since January 1, 14·294 inches of rain have fallen at this station on 87 days. The maximum shade temperature was 62·3° on the 16th, the minimum was 35·9° on the 4th.

JUNE.—Although the rainfall and rainy days were in excess of the average, and the amount of cloud was large, June, 1897, must be regarded as a favourable month, conducive to health and propitious to vegetation. It is a remarkable fact that with a preponderance of easterly and north-westerly winds, the relative humidity was very high, and radiation temperatures by night were not low. Fog was observed on as many as seven occasions—an unusual feature in June. It is also noteworthy that the percentage of cloud was higher at 9 p.m. (68·3°) than at 9 a.m. (66·7°). There was a very cold spell from the 15th to the 20th.

In Dublin the arithmetical mean temperature (58·7°) was above the average (57·8°) by 0·9°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 57·5°. In the thirty-two years ending

with 1896, June was coldest in 1882 (M. T.=55·8°); and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°); in 1865 (M. T.=61·0°); and in 1896 (M. T.=61·4°).

The mean height of the barometer was 29·999 inches, or 0·082 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·223 inches at 9 a.m. of the 3rd, and fell to 29·348 inches at 7 a.m. of the 18th. The observed range of atmospheric pressure was, therefore, 0·875 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 57·5°, or 7·0° above the value for May, 1897. Using the formula, *Mean Temp.=Min.+ (max.—min.* × ·465), the value was 58·2°, or 1·0° above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 58·7°, compared with a twenty-five years' average of 57·8°. On the 22nd the thermometer in the screen rose to 73·7°—wind, S.W.; on the 19th the temperature fell to 43·0°—wind, W.S.W. The minimum on the grass was 40·6°, also on the 19th.

The rainfall amounted to 3·257 inches, distributed over 20 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall and the rainy days, therefore, were much above the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days; in 1887, the rainfall was only ·252 inch, distributed over only 5 days. In 1896, 1·883 inches fell on 14 days.

High winds were noted on 7 days, but the force of a gale was attained only on the 16th. and 19th. The atmosphere was more or less foggy on the 2nd, 3rd, 5th, 8th, 23rd, 28th and 29th. Temperature reached or exceeded 70° in the screen on 6 days, compared with 17 days in 1887, only 1 day in 1888, and 9 days in 1896. A thunderstorm occurred on the 12th, and lightning was seen on the 22nd. Solar halos were observed on the 5th and 28th.

Changeable but favourable weather was experienced during the period ended Saturday, the 5th. On Tuesday, June 1st, an anticyclone spread south-westwards from Scandinavia to Scotland, while a shallow trough of low pressure stretched across the southern part of Ireland and England to the East of France. Within this area dull rainy weather was prevalent, and severe thunderstorms occurred in many parts of England, especially over the south-eastern countries. These electrical disturbances afterwards spread northwards with lessening intensity, but Ireland escaped. Towards the close of the period a general and considerable rise of temperature took place and there was a good deal of bright sunshine. Friday, however, was at first dull and rainy in and about Dublin, a very shallow barometric depression having apparently drifted westward from Lancashire and north Wales during Thursday night. The sky cleared about mid-day and very fine summerlike weather set in, lasting to the close of the period. The atmosphere was very thick on Saturday. In Dublin the range of pressnre was from 29·911 inches, at 9 p.m. of Tuesday, the 1st (wind, S.) to 30·223 inches at 9 a.m. of Thursday (wind, E.) On Thursday the screened thermometers fell to 44·0°, on Saturday they rose to 69·3°. The rainfall was ·340 inch on three days, ·280 inch being registered on Tuesday, the 1st. The prevailing wind was S.E.

Changeable weather was experienced during the week ending Saturday, the 12th, which opened and closed with warmth, the intervening period being very cold for the time of year. A rain storm of much intensity prevailed in Ireland, the southern half of England, and Belgium on Tuesday night, extending into Germany on Wednesday. The measurement of rain during the storm was ·67 inch in Dublin, ·64 inch in London, ·82 inch at Loughborough, 1·13 inches at Oxford, 1·22 inches at Cambridge, and 1·43 inches at Hurst Castle. The rainfall took place near the centre of a long trough of low atmospheric pressure, which stretched on Wednesday morning east-south-eastwards from the S.W. of Ireland to Belgium and the E. of France. To the southward of this line the wind was S.W. to W., to the northward it was easterly in direction, and temperature was very low. From Scotland, at this time, fine, cool, dry weather was reported, with very low night temperatures—at Nairn the screened thermometer fell to 31° on Monday night and to 34° on Tuesday night. The low-pressure system quickly filled up and dispersed, and a brisk rise of the barometer took place. On Thursday moderate gradients for S.W. winds formed over Ireland, where temperature rose fast. On Friday, for the first time this season, the shade thermometer rose above 70° (to 73·2°) in Dublin. Saturday also was fair and warm, but the sky became overcast and the air was heavy and sultry, a few drops of rain falling at intervals. After 9 45 p m. rain fell heavily, followed by a sharp thunderstorm. In Dublin the mean height of the barometer was 30·050 inches, the range being from 29·720 inches at 7 a.m. of Wednesday (wind, E.N.E.) to 30·180 inches at 8.30 a.m. of Saturday (wind, E. S.E.). The corrected mean temperature was 58·8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 58·0°. The screened thermometers fell to 49·2° on Wednesday and rose to 73·2° on Friday. The rainfall was 1·020 inches on five days, ·660 inch being recorded on Tuesday. Easterly winds prevailed.

The weather was in a troubled state throughout the week ended Saturday, the 19th—at least in Ireland and Scotland. In England it remained fine and warm until Wednesday, but from that day onward unsettled conditions held there as elsewhere. On Sunday, at 8 a.m., the thermometer stood at 75° in London, and later in the day it reached 84°. At this time a shallow depression lay over the S. of Ireland, causing dull and drizzling weather. By Monday this system had drifted north-eastwards to the North Sea, and had grown deeper, causing heavy rains in parts of Scotland. In Ireland a brisk N.W. wind brought finer and colder weather for the time being. On Tuesday a new and much deeper depression advanced across Ireland. It reached the S. of Scotland by Wednesday morning, having caused a disastrous gale and downpours of rain in many places. At

Ardrossan the rainfall amounted to 2·27 inches up to 8 a.m. of Wednesday. Harsh, cold N.W. winds blew with much violence in the rere of the centre. Scarcely had this disturbance passed away when another followed it, bringing severe S.W. gales to the English Channel. On Saturday again a depression passed over Ireland, where heavy rain fell for several hours. In the evening of this day temperature rose considerably, having been as low as 43° on Friday night. In Dublin the mean atmospheric pressure was 29·898 inches, the barometer rising to 30·211 inches at 9 p.m. of Monday (wind, W.N.W.), and falling to 29·348 inches at 7 a.m. of Friday (wind, N.W.). The corrected mean temperature was 54·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 54·4°, On Sunday the shade thermometers rose to 67·0°, on Saturday they fell to 43·0°. The rainfall was 1·112 inches on six days, ·459 inch being measured on Saturday. The prevalent wind was N.W. At Glasgow the rainfall was as much as 4·25 inches, and even at Edinburgh it was 3·27 inches.

A very marked advance in temperature is the most striking feature in the weather-record of the week ending Saturday, the 26th. On Sunday morning the centre of a depression, which had caused a general and in places heavy rainfall the previous day or night, was found over Norfolk. In Ireland the weather was fine and dry, but cloudy, with a brisk N.W. wind. In the afternoon slight rain fell. An anticyclone now began to spread northwards from France, throwing a warm S.W. wind upon the British Isles, where the weather became fine and summerlike. Tuesday—the day set apart for the Queen's Diamond Jubilee celebration—was cloudy to fair in London, brilliant in Dublin, where the thermometer rose to 73·7°. In the evening and at night sheet lightning was observed, thunderstorms being reported from Valentia and Parsonstown. On Wednesday afternoon or in the ensuing night a brisk fall of temperature occurred in the N. of England and in Ireland, accompanied by a sea fog on the east coast of Ireland. In the centre and S. of England, on the contrary, the heat increased, so that in London the maximum was 85° on Wednesday and 90° on Thursday. At 8 a.m. of this latter day the thermometer read 77° in London, but only 51° at Shields. In the afternoon of Thursday severe thunderstorms broke out over the east and south-east of England, where temperature fell rapidly. The rainfall accompanying the storm amounted to ·36 inch at Brixton in the S. of London. Fine weather held afterwards to the end of the week. In Dublin the mean height of the barometer was 30·004 inches, pressure ranging between 29·842° inches at 9 a.m. of Sunday (wind, N.W.) and 30·086 inches at 9 a.m. of Tuesday (wind, S.W.). The corrected mean temperature was 60·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·7°. On Sunday the screened thermometers fell to 50·8°, on Tuesday they rose to 73·7°. Rain fell on four days to the amount of ·162 inch, ·123 inch being measured on Wednesday. The wind was generally light in force and variable in direction.

While warm and for the most part summerlike, the weather of the closing period of the month (27th–30th, inclusive) was changeable. On the night of Sunday, the 27th, a heavy fall of rain (·450 inch) took place. The 28th broke foggy and damp, but in the end proved fine. At 4 p.m. a solar halo was seen. Another considerable fall of rain occurred at night. The last two days were fine and warm, after cloudy, dull mornings.

The rainfall in Dublin during the six months ending June 30th amounted to 13·950 inches on 113 days, compared with 7·854 inches on 84 days in 1896, 12·282 inches on 80 days in 1895, 14·361 inches on 109 days in 1894, 9·624 inches on 78 days in 1893, 11·770 inches on 97 days in 1892, 8·748 inches on 77 days in 1891, 13·413 inches on 94 days in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a twenty-five years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 4·005 inches, distributed over 16 days. Of this quantity 1·020 inches fell on the 8th, and ·780 inch on the 27th. The total fall since January 1 has been 18·125 inches on 106 days, compared with 7·356 inches on 61 days in the first six months of 1896, 14·270 inches on 67 days in 1895, 17·381 inches on 96 days in 1894, 11·776 inches on 75 days in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, amounted to 3·59 inches on 20 days. The greatest fall in 24 hours was 1·21 inches on the 8th. The average rainfall for June in the 12 years 1885-1896, was 1·515 inches on 11·7 days. In 1895, 1·94 inches fell on 12 days, in 1896 1·65 inches fell on 13 days. Since January 1, 1897, 14·80 inches of rain have fallen at this station on 113 days, compared with 6·98 inches on 70 days in the corresponding six months of 1896.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 4·078 inches on 15 days. On the 8th, 1·020 inches were measured, and on the 27th, ·830 inch. The maximum temperature in the shade was 73·8° on the 26th, the minimum temperature in the shade was 42·0° on the 3rd. At this climatological station the rainfall for the six months ending June 30, amounted to 18·372 inches on 102 days.

JULY.—A very favourable month, with sufficient rainfall and of average mean temperature. The showers were equably distributed throughout the month. There was a fair amount of bright sunshine. Electrical disturbances were rife and severe in England, but only trifling in Ireland. Very heavy showers of rain and hail fell in the vicinity of Dublin on the 25th and 26th.

In Dublin the arithmetical mean temperature (61·1°) was slightly above the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 60·3°. In the thirty-two years ending with 1896, July was coldest in 1879 (the "cold year") (M.T. = 57·2°). It was warmest in 1887 (M.T. = 63·7°); and in 1868 (the "warm year") (M.T. = 63·5°). In 1896 the M.T. was 60·9°.

The mean height of the barometer was 30·003 inches, or 0·088 inch above the corrected average value for July—namely, 29·915 inches. The mercury marked 30·361 inches at 9 a.m. of the 11th, and fell to 29·601 inches at 7 a.m. of the 20th. The observed range of atmospheric pressure was, therefore, 0·760 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 60·3°, or 2·8° above the value for June, 1897. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·465), the value was 60·6°, or 0·4° above the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 61·1°, compared with a twenty-five years' average of 60·6°. On the 23rd the thermometer in the screen rose to 75·1°—wind, S.W.; on the 11th the temperature fell to 46·1°—wind, E. The minimum on the grass was 42·5°, also on the 11th.

The rainfall was 1·650 inches, distributed over 12 days. The average rainfall for July in the twenty-five years, 1865-89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was considerably below the average, while the rainy days were still more below it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days; and in 1895, 4·503 inches on 16 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 only ·741 inch fell on but 5 days.

High winds were noted on 9 days, but attained the force of a gale on only one occasion —the 5th. Temperature reached or exceeded 70° in the screen on 7 days. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888, the maximum for July was only 65·7.

A thunderstorm occurred on the evening of the 21st. A solar halo was seen on the 4th. Hail fell on the 6th and 26th. The atmosphere was rather foggy on the 16th, 21st, and 31st.

The weather of the period ended Saturday, the 3rd, was changeable but favourable, with north-westerly to westerly winds and unsteady temperature. On Thursday, the 1st, an anticyclone lay off the W. of Ireland moving south-eastwards. On Friday a series of barometric depressions began to arrive off our N.W. and N. coasts, the wind backed to W. or S.W. and freshened with increasing cloudiness and some showers. The thermometer rose to 71·7° in the shade, having fallen to 52·3° during the previous night. Saturday was a dry but windy day.

The distribution of atmospheric pressure throughout the week ended Saturday, the 10th, was cyclonic in the N.W., N., and N.E., anticyclonic in France and Central Europe. Hence, unsettled weather prevailed in Ireland, Scotland, and Scandinavia, whereas it was comparatively fine in England and on the Continent. The force of the wind was considerable in Ireland and Scotland, amounting to a gale at times at exposed stations. On Sunday a large and rather deep depression passed eastwards across Scandinavia. In its rear, strong, squally and cool northwesterly winds blew over the British Islands—the amount of cloud was large, but very little rain fell except at the exposed Irish stations of Belmullet and Malin Head. At night the wind backed to W.S.W. and freshened to gale force as a new depression approached Scotland from the Atlantic. Near the centre of this system the barometer ultimately fell almost to 29 inches (to 29·04 inches at Sumburg Head on Tuesday evening). Very cold N.W. winds, with showers of rain and hail, set in as this disturbance moved away to the north-eastward. On Tuesday night the thermometer fell to 46° in Dublin and to 44° at Parsonstown. Thursday was a squally, wet, cold day in Ireland, but fair and bright over the greater part of England. On Friday a rapid increase of atmospheric pressure began, and on Saturday an anticyclone of considerable size covered the greater portion of the British Isles, the result being fine, quiet weather. In Dublin the mean height of the barometer was 29·921 inches, pressure ranging between 29·614 inches at 3 p.m. of Monday (wind, W.S.W.) and 30·335 inches at 9 p.m. of Saturday (wind, S.E.). The corrected mean temperature was 57·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 57·0°. The prevalent winds were N.W. and W. Rain fell to the amount of ·337 inch on three days, ·216 inch being measured on Thursday. A perfect solar halo appeared on Sunday afternoon.

Throughout the week ended Saturday, the 17th, the distribution of atmospheric pressure was anticyclonic in the British Islands and their immediate neighbourhood. Fair, summerlike weather was generally prevalent, and there was a large amount of bright sunshine, while scarcely any rain fell. Easterly winds prevailed until Friday, when either calms or variable westerly breezes took their place. On Sunday morning the barometer stood at 30·41 inches at Cambridge. By Monday morning the isobar of 30·4 inches had re-formed over Scandinavia, in which neighbourhood it was still found on Tuesday. At this time a shallow depression was forming over the Mediterranean, so that gradients for easterly winds became decided, especially in S.E. of England. The low pressure area subsequently advanced northwards across France, while a more marked depression formed over Germany. These irregularities caused thunder-rains in many parts of the Continent, but the weather remained dry in the United Kingdom until Friday, when some sultry showers fell in the south and west of Ireland. On Saturday the barometer began to fall somewhat decidedly, but the weather was very fine and warm generally. In Dublin the mean height of the barometer was 30·134 inches, pressure varying between 30·361 inches at 9 a.m. of Sunday (wind, E.), and 29·947 inches at 9 p.m. of Wednesday (wind also E.). The corrected mean temperature was 61·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 62·5°. On Saturday the shade thermometer rose to 73·9°; on Sunday it fell to 46·1°. Easterly winds prevailed, chiefly light in force. The only rainfall was ·002 inch on Friday, which, however, did not count as a "rainy day."

At the beginning of the week ended Saturday, the 24th, the weather fell into an unsettled, thundery condition owing to the formation of a large and finally complex depression over Ireland, England, the North Sea, France and Belgium. On Sunday afternoon the weather broke in the east of Ireland with a chill and the formation of dense vapour fog on the headlands along the coast. Heavy showers fell early on Monday morning in Dublin, and thunder and lightning occurred in the English Channel. On Tuesday an irregular area of low atmospheric pressure lay over Ireland, England, and Denmark. Thunderstorms had already occurred in the S. and S.E of England, and rain fell abundantly except in the N. of England and Scotland. During Tuesday and Wednesday

electrical disturbances were again prevalent in England, and a sharp thunderstorm passed over Dublin also on Wednesday evening. Earlier in the day a violent thunder and hail storm had visited the northern suburbs of London. The depressions subsequently passed on to Denmark, while northerly winds brought a spell of fine weather to the British Islands. On Friday, however, the barometer again gave way in the W., the wind backed to W. and finally to S., and the week closed with a renewal of unsettled weather. In Dublin the mean height of the barometer was 29·864 inches, pressure ranging between 29·601 inches at 7 a.m. of Tuesday (wind, E.N.E.), and 30·048 inches at 9 p.m. of Thursday (wind, W.S.W.). The mean dry bulb thermometer reading at 9 a.m. and 9 p.m. was 61·0°. The corrected mean temperature was 61·5°. On Thursday the screened thermometers fell to 54·2°, on Friday they rose to 75·1°—the highest reading so far recorded this season in Dublin. The rainfall was ·690 inch on four days, ·228 inch being measured as the result of Wednesday's thunderstorm. The prevalent wind was E.N.E..

During the week ended Saturday, the 31st, broken and showery at first, the weather subsequently became fine and warm. On Sunday morning the centre of a large, though not deep, atmospheric depression lay off the Hebrides, where the barometer read 29·50 inches compared with 30·30 inches at Corunna. Fresh S.W. winds were blowing, accompanied by heavy showers in many districts. Thunder and lightning occurred in the course of the day in the N.E. of Ireland, the N. of Scotland, and the N.E. and centre of England. At 8 a.m. of Monday the depression was central between Caithness and the Shetlands, the barometer being down to 29·45 inches. In Ireland the wind had drawn into W. or W.N.W. Heavy showers of rain and hail fell in Dublin at intervals, while thunder and lightning were prevalent all over the centre and east of England and at Aberdeen. A steady and general rise of the barometer now set in, as an anticyclone spread north-eastwards from the Atlantic and Bay of Biscay across the British Islands. While it was forming a considerable fall of warm rain took place in Ireland on Wednesday. By Thursday evening the anticyclone had fully developed, and pressure reached 30·37 inches in the S.W. of Ireland. The last three days of the week were fine and summerlike, but much cloud was reported, and a good deal of fog hung about the coasts and over the Channels. In Dublin the mean height of the barometer was 30·046 inches, pressure ranging between 29·670 inches on Sunday afternoon (wind, W.), and 30·357 inches at 9 a.m. of Friday (wind, W.S.W.). The corrected mean temperature was 62·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 61·4°. On Thursday the shade thermometers rose to 71·8°, on Tuesday they fell to 53·3°. The wind was westerly (between S.W. & N.W.) for the most part. The rainfall was ·611 inch on four days, ·285 inch being measured on Monday, when also hail fell.

The rainfall in Dublin during the seven months ending July 31st amounted to 15·600 inches on 125 days, compared with 13·328 inches on 102 days in 1896, 16·785 inches on 96 days in 1895 18·133 inches on 130 days in 1894, 11·666 inches on 92 days in 1893, 7·935 inches on 80 days in 1887, and a twenty-five years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·625 inches on 10 days, compared with 5·726 inches on 16 days in 1896, 3·680 inches on 16 days in 1895, 3·805 inches on 19 days in 1894, and 1·290 inches on 15 days in 1893. Of the total rainfall ·470 inch fell on the 26th, and ·415 inch on the 25th. The total fall since January 1 has been 19·750 inches on 116 days, compared with 13·082 inches on 77 days in 1896, 17·950 inches on 83 days in 1895, 21·186 inches on 115 days in 1894, and 13·066 inches on 90 days in 1893.

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was 1·28 inches on 10 days, compared with a twelve years' average of 2·554 inches on 16·3 days. On the 27th the rainfall was ·28 inch. In July, 1896, 6·72 inches fell on 20 days, in 1895 3·58 inches fell on 17 days, in 1894 4·08 inches fell on 23 days. Since January 1, 1897, 16·08 inches of rain have fallen on 123 days at this station (Cloneevin).

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1·425 inches on 11 days, ·297 inch being measured on the 18th. At this climatological station 19·797 inches of rain have fallen on 113 days since January 1, 1897. The maximal temperature in the shade in July was 77° on the 16th, the minimum was 42·5° on the 11th. The thermometer rose to or above 70° in the screen on eleven occasions during the month.

August.—A changeable, showery, windy month, but tolerably warm. In fact great heat prevailed during the first week, which was in all respects summerlike. During the rainy period which followed, temperature did not fall low owing to the prevalence of southerly and south-westerly winds. Thunder and lightning occurred frequently in Great Britain, to a far less extent in Ireland. The wind was often high and squally.

In Dublin the arithmetical mean temperature (60·8°) was decidedly above the average (59·7°) the mean dry bulb readings at 9 a.m. and 9 p.m. were 59·2°. In the thirty-two years ending with 1896, August was coldest in 1881 (M. T.=57·0°), and warmest in 1893 (M. T.=63·0°). In 1895 the M.T. was 60·0°; in 1879 (the "cold year"), it was 57·7°; in 1896 it was 58·3°.

The mean height of the barometer was 29·709 inches, or 0·188 inch below the corrected average value for August—namely, 29·897 inches. The mercury marked 30·205 inches at 9 p.m. of the 2nd, and fell to 29·246 inches at 5 p.m. of the 21st. The observed range of atmospheric pressure was, therefore, ·959 inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 59·2°, or 1·7° above the value in August, 1896. It was 1·1° below the value for July, 1897. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the mean temperature was 60·4°, or 1·1° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 60·8°, compared with a twenty-five years' average of 59·7°. On the 4th the thermometer in the screen rose to 76·8°—wind, S.SE.; on the 19th the temperature fell to 49·2°—wind, W. The minimum on the grass was 45·4°, on the 19th and 27th.

The rainfall was 3·788 inches, distributed over 24 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and the rainy days were considerably in excess of the average. In 1874 the rainfall in August was very large—4·946 inches on 18 days; and in 1868, also, 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1896, 1·136 inches fell on 18 days.

High winds were noted on as many as 16 days, and attained the force of a gale on three occasions in Dublin—the 17th, 26th, and 30th. Thunder occurred on the 14th, thunder and lightning on the 18th. Temperature reached 70° in the screen on 5 days—all in the first week. The morning of the 1st was foggy.

The most noteworthy feature in the weather of the week ended Saturday, the 7th, was the intensity of the heat which prevailed in most parts of western Europe—particularly in England and France. As is usual, this culminated in violent thunderstorms on Wednesday and Thursday. On both of these days the thermometer touched 90° in the shade at Cambridge—the London maxima were 88° and 87° respectively. Until Wednesday all parts of the British Islands were under the full influence of an anticyclone, or system of high atmospheric pressure. While of no great intensity, this anticyclone had much staying power, and as the winds were light and the sky comparatively free of cloud, the sun's heat had full sway and the thermometer rose higher and higher each day. On Wednesday a decided fall of the barometer occurred in the west, as a large area of low pressure moved in over Ireland from the Atlantic. The fall of the barometer went on gradually until Friday morning, when readings as low as 29·45 inches were reported from the N. and N.W. of Ireland. The wind now veered into W. from S. and a gradual but decided reduction of temperature took place, Saturday proving a cool, cloudy, rather showery day. In Dublin the mean height of the barometer was 29·909 inches, the range being from 30·205 inches at 9 p.m. of Monday (wind, E.N.E.), to 29·541 inches at 9 a.m. of Friday (wind, S.W.). The corrected mean temperature was 64·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 63·2°. On Sunday the screened thermometers fell to 53·5°; on Wednesday they rose to 76·8° (the highest reading recorded this season in Dublin). The rainfall was ·911 inch, on two days, ·901 inch being measured on Saturday. Of this large amount, ·890 inch fell in a rainstorm on the morning of Sunday, August 8. The prevalent wind was S.E.

Very changeable, rainy or showery weather held during the week ended Saturday, the 14th, the rainfall being particularly heavy and frequent at the Irish and Scotch stations. In the east and south-east of England spells of fine, dry weather were enjoyed. On Sunday morning an oval-shaped depression had its centre over St. George's Channel, whence it stretched northwestwards to Connaught and southeastwards to the S.W. of England and the English Channel. From this position the system travelled eastward across England, causing very heavy rains in many places. Monday was very fine, but on Tuesday morning a new disturbance lay off the S.W. of Ireland, whence it travelled northeastwards and caused another downpour of rain in Ireland, Wales, the N. of England and Scotland. Thunderstorms broke out on Wednesday in Great Britain generally. On Friday and Saturday an area of low pressure was found off the N.W. of Ireland and W. of Scotland. This system kept the weather in a showery, squally condition to the close of the week. In Dublin the mean atmospheric pressure was 29·811 inches, the barometer falling to 29·546 inches at 9 a.m. of Sunday (wind, N.E.), and rising to 30·013 inches at 9 a.m. of Thursday (wind, W.). The corrected mean temperature was 60·3°, or 4·0 below that of the previous week. The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·4°. On Monday the screened thermometers rose to 68·6°, on Thursday they sank to 51·9°. The rainfall amounted to ·837 inch on six days, ·420 inch being measured on Tuesday. The prevalent winds were S.S.W. and N.W. Thunder was heard on Saturday afternoon, when thunder, lightning, and hail were observed in the County Kildare.

Very changeable, rainy weather prevailed throughout the week ended Saturday, the 21st. A succession of primary barometric depressions of considerable size and depth passed across the N.W. of Ireland and of Scotland, while their subsidiary or secondary disturbances travelled across the more southern and central portions of the United Kingdom. Strong S.W. to N.W. winds and frequent showers, accompanied by thunder and lightning from time to time, were the result. Temperature was also most unsteady, Wednesday night being particularly cold, while Tuesday and Friday were tolerably warm days. In the S.E. of England intervals of fine, dry, and fairly warm weather were enjoyed, but in Ireland, Wales, the greater part of England and Scotland, rain fell heavily almost daily. In Dublin two showers on Wednesday yielded nearly half an inch of rain in the gauge (·480 inch); of these showers the second was attended with thunder and lightning. On Tuesday the wind rose to the force of a fresh gale from W.S.W. in the forenoon, but it moderated after 2 p.m., and a fine evening followed. In Dublin the mean height of the barometer was 29·588 inches, the range being from 29·838 inches at 9 a.m. of Monday (wind, W.) to 29·246 inches at 5 p.m. of Saturday (wind, W.S.W). The corrected mean temperature was 59·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 58·0°. On Thursday the screened thermometers fell to 49·2°; on Friday they rose to 68·4°. Rain fell daily to the total amount of 1·247 inches, ·480 inch being measured on Wednesday, when thunder and lightning occurred. Westerly winds (between S.S.W. and N.W.) prevailed.

During the week ended Saturday, the 28th, the weather remained changeable as in past weeks, squally and showery with a preponderance of south-westerly winds. In a word, it was of a cyclonic type. The scene of the heaviest rainfall was, however, shifted from Ireland and Scotland to England, and after Tuesday to the S. and S.E. of the last-named country. During Sunday a fresh breeze blew from W.N.W., and the weather, although cloudy, was chiefly fine and dry. On

Monday a new depression advanced over Ireland from the westward, throwing the weather again into an unsettled, showery condition. By Tuesday morning the centre of this disturbance had reached St. George's Channel. It subsequently passed across England in an east-north-easterly direction, causing thunderstorms and heavy rains in that country. In Ireland, after a dull, rainy morning, the weather became bright, with a light breeze from N.E. and later from N. Wednesday was cloudy to fair in Dublin, but the weather remained thundery and showery in the S. and S.E., of England. At night a brisk fall of the barometer heralded the approach of a new depression to the Irish coasts. This system caused a short summer-gale and driving rain on Thursday morning, but the afternoon was fair and sunny. A subsidiary depression formed at this time over England and spread eastwards, so that heavy rains accompanied by thunder were again experienced very generally in Great Britain. Breezy, showery weather lasted to the close of the week. In Dublin the mean atmospheric pressure was 29·624 inches, the barometer falling to 29·414 inches at 1 p.m. of Thursday (wind, S.E. to S.), and rising to 29·788 inches at 9 p.m. of Saturday (wind, S.W.). The corrected mean temperature was 58·9°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 57·2°. On Sunday the minimum was 50·9°, on Thursday the maximum was 68·7° in the shade. Rain fell on six days to the amount of ·301 inch, ·141 inch being measured on Monday. At Greystones 1·125 inches of rain fell during this week. Southerly and south-westerly winds prevailed.

The last three days were changeable like the greater part of the month. On Sunday, the 29th, a deep depression, in which the barometer fell almost to 29 inches, passed northwards across Ireland. It caused fresh southerly gales and heavy rains, and was followed by showers and squalls alternating with fine, bright intervals to the close of the month.

The rainfall in Dublin during the eight months ending August 31st amounted to 19·388 inches on 149 days, compared with 14·464 inches on 120 days in 1896, 9·455 inches on 96 days during the same period in 1887, and a twenty-five years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August was 6·195 inches on 27 days, compared with 1·245 inches on 14 days in 1896, and 4·735 inches distributed over 24 days in 1895. Of this quantity ·850 inch fell on the 7th. The total fall since January 1 amounts to 25·945 inches on 143 days, compared with 14·327 inches on 91 days in 1896, 22·685 inches on 107 days in 1895, 25·206 inches on 131 days in 1894, 16·341 inches on 106 days in 1893, and 21·296 inches on 108 days in 1892.

At the National Hospital, Newcastle, Co. Wicklow, the rainfall in August was 4·526 inches on 20 days, ·807 inch being measured on the 29th and ·728 inch on the 7th.

SEPTEMBER.—This month began badly, but proved favourable after the first few days, which were cold and wet. A rainstorm of great violence occurred in the east and south-east of Ireland on the 1st, when 2·700 inches of rain were measured at Greystones, and 1·166 inches in Dublin. An anticyclone formed on the 8th, bringing a week of beautiful weather. On the 29th a severe thunderstorm, accompanied by torrents of rain, passed over the south and south-east of England. The night temperatures were particularly low from time to time.

In Dublin the arithmetical mean temperature (54·5°) was below the average (55·8°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 53·0°. In the thirty-two years ending with 1896, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T.=61·4°). The three warmest Septembers experienced in Dublin of late years have been—1865 (M. T.=61·4°), 1890 (M. T.=59·6°), and 1895 (M. T.=59·1).

The mean height of the barometer was 29·990 inches, or 0·080 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·578 inches at 9 a.m. of the 13th, and fell to 29·177 inches at 6.45 p.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·401 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 53·0°, or 6·2° below the value for August, 1897. Using the formula, *Mean Temp.* $=Min.+(max.-min.\times\cdot476)$, the mean temperature was 54·2°, or 1·3° below the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89, inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 54·5°, compared with a twenty-five years' average of 55·8°. On the 23rd the thermometer in the screen rose to 67·7°—wind, W.S.W.; on the 18th the temperature fell to 40·9°—wind, N.W. The minimum on the grass was 36·8°, on the 11th.

The rainfall was 2·583 inches, distributed over 16 days. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall was very large—4·048 inches on, however, only 13 days. In 1896, no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1894, only ·442 inch fell on 8 days; and in 1895, only ·543 inch on 7 days.

High winds were noted on eleven days, but attained the force of a gale on only one occasion in Dublin—the 23rd. The atmosphere was foggy on the 9th, 10th, 11th, 13th, 27th, and 30th. Hail fell on the 3rd, 17th, and 18th. A solar halo was seen on the 7th.

The bad weather, which had prevailed since the second week in August, continued throughout the period ending Saturday, the 4th, which may be described as stormy, wet, and finally extremely cold for the time of year. Wednesday, the 1st, broke cloudy and threatening, and the barometer fell fast as a new cyclonic system advanced quickly to St. George's Channel from the southwestward. In Dublin a violent rainstorm began at noon, lasting until 6 p.m. In these six hours nearly an inch of rain (·980 inch) fell, and the wind backed to S.E., E., N.E., and finally N., blowing freshly through-

out. By 6.45 p.m. the barometer had fallen to 29·177 inches. Rain again set in at night, so that by 9 a.m. of Thursday, the 2nd, the measurement for the previous twenty-fours was as much as 1·166 inches, or more than half the average rainfall for September—namely, 2·176 inches. The cyclone subsequently crossed Wales and England, travelling N.E., so that its centre reached Norway on Friday morning. In its rear a remarkable fall of temperature occurred, the thermometer falling to 38° at Stornoway, 39° at Wick, 40° at Parsonstown, and 41° in Dublin early on Friday morning, and on Friday night to between 34° and 36° over Scotland. Heavy hail showers fell on this day, but conditions moderated on Saturday. In Dublin the height of the barometer ranged from 29·177 inches at 6.45 p.m. of Wednesday (wind, N.) to 30·054 inches at 9 p.m. of Saturday (wind, W.N.W.). On Wednesday the screened thermometers rose to 61·4°, on Friday they fell to 41·0°. The rainfall was 1·582 inches on four days, 1·166 inches being recorded on Wednesday. The prevalent wind was N.N.W.

The week ended Saturday, the 11th, happily witnessed a marked change for the better in the weather, which after Wednesday continued fine, sunny and dry to the close of the period. This most fortunate and pleasant change was brought about by the development of an area of high atmospheric pressure (anticyclone) in the extreme N.W.—the very region where the barometer had previously ruled lowest for weeks together. The increase of pressure began on Wednesday and continued until Saturday, when the barometer stood well above 30·4 inches over the greater part of the British Isles. On Sunday the centre of a large depression lay near Hernösand in Sweden, while another area of low pressure was found off the N. of Ireland and W. of Scotland. The latter system caused wet weather in nearly all districts. The primary disturbance and its secondaries then began to pass south-eastwards, while the anticyclone above-mentioned spread in from the N.W. over the United Kingdom. On Wednesday morning a shallow depression over the S.W. of Ireland brought rainy weather to Ireland south of Dundalk, Wales, and the entire of the S. of England. In Scotland and the N. and N.E. of Ireland the weather was brilliantly fine. As this depression passed south-eastwards to France, easterly winds, cloudless skies, and delightful weather became general in the United Kingdom, while heavy rains fell on the Continent. The nights were now very sharp—the thermometer falling in the screen to 34° at Parsonstown on Thursday night. In Dublin the mean pressure was 30·075 inches, the range being from 29·738 inches at 9 a.m. of Sunday (wind, W.) to 30·443 inches at 9 p.m. of Saturday (wind, calm). The corrected mean temperature was 53·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 52·0°. On Monday the screened thermometers rose to 62·8°, on Friday they fell to 41·1°. Rain fell on the first four days to the amount of ·370 inch, ·188 inch being measured on Sunday. Westerly winds at first, followed by easterly on Wednesday.

Taken as a whole, the weather of the week ended Saturday, the 18th, was distinctly favourable. At first anticyclonic and genial in point of temperature, it finally became changeable, showery, and cold. But the rains were not torrential, like those of August and the first week of September, and so no further damage was done to the harvest. The barometer stood very high over the British Islands until Wednesday, when the anticyclone, which had brought such fine weather in the middle of the previous week, moved away to the south-westward. On Sunday atmospheric pressure was relatively low both off the N.W. of Norway (29·69 inches at Bodö) and in the Mediterranean Basin. A broad band of high pressure stretched from the South of Ireland (30·51 inches at Roche's Point) to the Baltic. Light variable winds and sunny weather prevailed. The anticyclone reached its fullest development on Monday, when the reading 30·58 inches was reported from several stations, including Dublin. Pressure now gave way—at first slowly and then quickly, so that on Thursday evening signs of a large depression were found between Scotland and Norway. This disturbance afterwards travelled south-eastwards and spread southwards over the whole Kingdom, so that cold N.W. winds and showers of chilly rain and hail became general, thunder and lightning occurring in some places. On Saturday the wind drew into N. in Ireland and the weather became almost wintry. In Dublin the mean height of the barometer was 30·217 inches, pressure ranging between 30·578 inches at 9 a.m. of Monday (wind, S.S.E.), and 29·653 inches at 6 p.m. of Friday (wind, N.W.). The corrected mean temperature was 55·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·8°. On Tuesday the screened thermometers rose to 66·8°, on Saturday they fell to 40·9°. Rain fell on the last three days to the amount of ·240 inch, ·150 inch being measured on Friday. Hail showers occurred on Friday and Saturday. N.W. winds prevailed.

Although changeable, the weather during the week ended Saturday, the 25th, was on the whole not unfavourable. At first atmospheric depressions were found to the eastward of the North Sea, while the barometer was relatively high off the W. and S.W. of Ireland. Hence cold, northerly and north-westerly winds prevailed, and were accompanied by showers at times, especially in Great Britain. Such showers fell in Dublin on Monday night. By Tuesday morning the barometer fell nearly to 29 inches near Christiania (to 29·02 inches at Færder, on the Christiania Fjord). On Wednesday a new and brisk decrease of pressure took place in Ireland and Scotland, as another series of depressions approached our N.W. coasts. Under their influence the wind backed to W. and finally to S.W., while temperature rose fast. On Thursday forenoon the wind rose to gale force, but brilliant and hot sunshine was enjoyed in Dublin. Towards evening clouds overspread the sky, and there were showers of drizzling rain. During the ensuing night rain fell more heavily, and Friday was at first dull, rainy, and squally. In the afternoon of this day, however, it became fine, dry, and cold, and Saturday proved brilliantly fine with a fresh S.W. wind. In Dublin the mean height of the barometer was 29·839 inches, pressure ranging between 29·508 inches at 3.45 p.m. of Thursday (wind, W.S.W.), and 30·057 inches at 9 a.m. of Saturday (wind, S.W.) The corrected mean temperature was 54·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 53·5°. On Sunday the screened thermometers fell to 41·8°, on Thursday they rose to 67·7°. The rainfall was ·237 inch on 3 days, ·142 inch being measured on Thursday. The prevalent winds were—at first N.W., afterwards S.W. The force of the wind was considerable

The most striking feature of the weather during the closing period of the month—26th to 30th, inclusive—was a violent thunderstorm which passed over the south and south-east of England on Wednesday evening. It was accompanied by very heavy rains and caused loss of life. The rainfall during the storm was 1·03 inches at Brixton, London, 1·13 inches at Oxford, and 1·45 inches at Cambridge. The disturbance was unfelt in Ireland, but extended to France on Thursday. Sunday was very fine after a slight shower in the forenoon. As the day advanced an anticyclone spread westward from the Continent causing a brisk rise of the barometer and still finer weather. On Monday morning a wet vapour fog lay over Ireland, but this soon dispersed. During the next two days the barometer fell steadily and a complex depression formed over the British Islands, leading to the electrical storm of Wednesday night. On Wednesday forenoon a lofty sheet of cirriform cloud was seen from Dublin clearing off from S.S.W. At night the wind shifted in Ireland to N., and an exceptionally heavy electrical shower fell at 8.15 a.m. of Thursday. The weather then remained fine. In Dublin the height of the barometer ranged from 30·200 inches at 9 a.m. of Monday (wind, S.W.) to 29·684 inches at 9 p.m. of Wednesday (wind also S.W.). The extreme range of temperature in the shade, from 45·3° to 64·0°, was recorded on one and the same day—Monday. The rainfall was ·154 inch on two days, ·119 inch being measured on Wednesday. The prevalent winds were S.W.

The rainfall in Dublin during the nine months ending September 30th amounted to 21·971 inches on 165 days, compared with 10·968 inches on 112 days during the same period in 1887, 19·537 inches on 143 days in 1896, and a twenty-five years' average of 19·734 inches on 142·8 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall was 3·625 inches distributed over 15 days. Of this quantity 2·700 inches fell on the 1st. At this station the rainfall since January 1, 1897, has been 29·570 inches on 158 days, compared with 17·091 inches on 118 days in the same nine months of 1893, 25·896 inches on 137 days in 1894, 23·665 inches on 117 days in 1895, and 21·912 inches on 115 days in 1896.

At Cloneevin, Killiney, Co. Dublin, the rainfall in August was 4·50 inches on 21 days (the maximal fall in 24 hours being ·76 inch on the 29th), compared with a twelve years' average of 2·887 inches on 16·5 days. In September 2·33 inches fell at Cloneevin on 14 days. The maximal fall in 24 hours was 1·42 inches on the 1st. On an average of twelve years the September rainfall at this station has been 1·773 inches on 12·1 days. Since January 1, 1897, 22·91 inches of rain have fallen at Cloneevin on 158 days. The rainfall in the first nine months of the year at Cloneevin was 22·92 inches on 150 days in 1894, 21·58 inches on 129 days in 1895, and 20·50 inches on 129 days in 1896.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell in measurable quantity on 11 days, during September to the total amount of 3·166 inches. On the 1st the record was as large as 2·308 inches—more than two-thirds of the entire rainfall for the month. The highest temperature in the screen was 68° on the 14th, the lowest was 41° on the 10th.

October.—Quite unlike the cold Octobers of 1894, 1895, and 1896, this month was strangely genial and fine—nay more, the temperature of the air actually rose towards the close, thus reversing the seasonal range for the time of year. The weather of the second week was, indeed, rough and wet; but this only accentuated the quietness and mildness of the beginning and end of the month. These features were due to the prevalence of anticyclonic conditions over Western and Central Europe, Ireland getting the benefit of the warmth attending the southerly winds of the area of high atmospheric pressure.

In Dublin the arithmetical mean temperature (52·3°) was much above the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 51·1°. In the thirty-two years ending with 1896, October was coldest in 1892 (M. T. = 44·8°), and in 1896 (M. T. = 45·0°). It was warmest in 1876 (M. T. = 53·1°). In 1895 the M. T. was only 46·2°.

The mean height of the barometer was 30·096 inches, or 0·256 inch above the corrected average value for October, namely, 29·840 inches. The mercury rose to 30·561 inches at 9 a.m. of the 21st, and fell to 29·074 inches at 2 a.m. of the 16th. The observed range of atmospheric pressure was, therefore, as much as 1·487 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 51·1°, or only 1·9° below the value for September. The arithmetical mean of the maximal and minimal readings was 52·3°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.* — *min.* × ·485), the value was 52·1°, or 2·6° above the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865–89, inclusive (49·5°). On the 17th the thermometer in the screen rose to 62·9°—wind, S.; on the 12th, the temperature fell to 36·1°—wind, W.N.W. The minimum on the grass was 33·0°, also on the 12th. The thermometer did not sink to or below 32° in the screen, or even on the grass.

The rainfall was 2·110 inches, distributed over 14 days—the rainfall and the rainy days were decidedly below the average. The average rainfall for October in the twenty-five years, 1865–89, inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890, only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days.

Lightning was seen on the night of the 15th–16th. High winds were noted on nine days, and attained the force of a gale on three occasions—the 10th, 16th, and 17th. The atmosphere was more or less foggy in Dublin on the 1st, 2nd, 13th, 14th, 20th, 21st, 28th, 30th, and 31st. Hail fell on the 10th. A lunar halo appeared on the 7th. A solar halo was seen on the 28th.

Friday, the 1st, was at first foggy and cloudy, afterwards fine and mild. On Saturday, the 2nd

rain fell at intervals—heavily for an hour in the forenoon and still more heavily in the afternoon—the total measurement was ·293 inch.

Generally favourable weather prevailed during the week ended Saturday, the 9th, which was signalised by a cold snap of some intensity on the Continent and also in England, Ireland and Scotland entirely escaping it owing to the prevalence of S.W. and W. winds and cloudy skies. On Sunday an anticyclone lay off the W. of Ireland, where the barometer stood above 30·4 inches, and a V-shaped depression was found over the North Sea. The latter system had caused a considerable fall of rain during the previous 24 hours, first in Ireland and later on in England. The weather after this remained very fine until Tuesday evening, when rain fell in Ireland, as a large tongue of high atmospheric pressure formed over the Baltic, North Sea, and England, steepening gradients for S. and S.W. winds in Ireland and Scotland, and causing a cold N.E. wind to spring up all over Central Europe. Calms, fogs, and low temperature set in over England, and a continuous fall of snow occurred at Munich, freezing weather being felt all over Germany, Switzerland, and France. On Thursday night the thermometer fell to 28° in the shade in Paris and at Belfort. Towards the close of the week a new area of high atmospheric pressure was in course of formation off the S.W. of Ireland, in which country temperature was giving way while the weather became fine and dry although cloudy. The mean height of the barometer in Dublin was 30·305 inches, pressure ranging between 30·474 inches at 9 a.m. of Monday (wind, W.N.W.) and 30·070 inches at 1 p.m. of Friday (wind, W.N.W.). The corrected mean temperature was 51·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·7°. On Monday the screened thermometers fell to 42·1°; on Thursday they rose to 59·2°. The rainfall was ·187 inch on three days, ·140 inch being measured on Tuesday. The prevalent winds were W.N.W. and S.W.

Very unsettled weather prevailed throughout the week ended Saturday, the 16th. Until Wednesday the British Islands were affected by a large depression, which was found near the Shetlands on Sunday morning and moved slowly thence to Scandinavia, becoming deeper and spreading out southwards as it travelled. By 8 a.m. of Tuesday the barometer had fallen to 28·97 inches at Christiansund, on the W. coast of Norway, near the centre of the depression. At first this system caused strong westerly winds, clouds and some rain in most districts, temperature being rather high on Sunday (Dublin, Loughborough and Leith recording 60°, Aberdeen 63°). As the disturbance moved eastward, however, the wind drew into N.W. and N. and the air became much colder, raw and searching. On Monday night the thermometer in the screen fell to 31° at Parsonstown, and 36° in Dublin. Hail, sleet, and snow fell in Scotland on Tuesday. On Wednesday morning, while the cold N.W. winds of the northern depression were still blowing in that country, a new depression appeared off the S.W. of Ireland. Under its influence the wind shifted to E., S.E., or S. over the southern half of the United Kingdom, and temperature rose considerably, while rain fell heavily in Ireland, and in the N.W. and N.E. of England, from time to time. Scotland came within the sphere of the southwestern depression on Friday, so that an easterly gale and heavy rainfall occurred. Lightning was seen on Friday night. During the last three days abrupt changes from foul to fair weather took place, particularly in and near Dublin. In this city the mean height of the barometer was 29·709 inches, the range being from 30·069 inches at 9 a.m. of Sunday (wind, W.) to 29·074 inches at 2 a.m. of Saturday (wind, S.). The corrected mean temperature was 49·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 49·3°. On Sunday the screened thermometers rose to 59·8°, on Tuesday they fell to 36·1°. The rainfall was 1·302 inches on six days, ·637 inch being measured on Thursday. The prevalent winds were W.N.W. and S.S.E.

Opening with unsettled, very rough weather, the week ended Saturday, the 23rd, proved extremely fine and quiet. The change was brought about by the spreading northwestwards and northwards of an anticyclone, which was already forming over Central Europe early on Sunday. At that time a large and deep depression was travelling in a northerly direction across Ireland, where a heavy southerly gale was blowing while rain fell in large quantities—the measurements at 8 a.m. were ·77 inch at Parsonstown, 1·40 inches at Roche's Point, and 1·43 inches at Valentia Island. In Dublin the gale continued to blow for several hours, but the weather became bright and warm at 11.20 a.m., the shade thermometer rising to 62·9°. Gradients for S.W. winds were still rather steep but decreasing, so that the weather became fine and warm as the day advanced. On Tuesday anticyclonic conditions were fully established, the wind died down and calms and fogs became prevalent, especially at night. In the daytime there was hot sunshine, so that the diurnal range of temperature was unusually large. On Thursday the screened thermometer at Nairn, in the N.E. of Scotland, rose to 66°, while it fell to 32° during the ensuing night—a range of 34° within a few hours. From Thursday evening to the close of the week easterly and south-easterly breezes prevailed, and clouds increased on Saturday from S.E. At this time the barometer was falling decidedly in the south. In Dublin the mean atmospheric pressure equalled 30·215 inches, the range being from 29·403 inches at 9 a.m. of Sunday (wind, S. by W., blowing a gale), to 30·561 inches at 9 a.m. of Thursday (wind, W., light). The corrected mean temperature was 52·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 50·0°. On Sunday the screened thermometers rose to 62·9°; on Thursday they fell to 38·1°. Rain fell on Sunday to the amount of ·155 inch. The prevalent winds were at first S.W., then E.S.E.

Generally favourable weather was experienced in the week ended Saturday, the 30th. In the London district, however, rain fell on Monday and Tuesday, and fog and gloom were very prevalent until Friday, which was bright and very warm. In Dublin conditions were at first much finer, and summerlike warmth was enjoyed on Wednesday, Thursday, and Friday. Saturday, on the contrary, proved dull, damp, and rainy as well as foggy at times. An anticyclone, of which mention was made in last week's report, held its position over the south of Scandinavia, Denmark, and Germany; but depressions appeared to be passing northwards across the Atlantic outside the West of Ireland after Monday. This distribution of atmospheric pressure caused strong southerly winds and warmth in Ireland. On Thursday night a strong southerly gale blew at Belmullet. On Saturday the

barometer rose in Ireland, equalising pressure, so that calm, foggy, and finally cooler weather set in. The change was accompanied by a fall of rain. In Dublin the corrected mean height of the barometer was 30·116 inches, pressure ranging between 30·252 inches at 9 a.m. of Sunday (wind, E.), and 29·893 inches at 9 p.m. of Friday (wind, S.S.E.). The corrected mean temperature was 54·0. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·6°. On Tuesday the screened thermometers fell to 45·2°, on Thursday they rose to 60·8°. The rainfall was ·173 inch on three days, ·091 inch being measured on Saturday. The prevailing winds were E. and S.S.E. A solar halo was seen on Thursday. The mean temperature was about the same as that of the week ended Saturday, September 4, 1897.

Sunday, the 31st, was very fine and genial.

The rainfall in Dublin during the ten months ending October 31st amounted to 24·081 inches on 179 days, compared with 12·366 inches on 123 days during the same period in 1887 (the dry year), 23·716 inches on 146 days in 1895, 22·052 inches on 165 days in 1896, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in October amounted to 3·160 inches on 13 days. Of this quantity ·900 inch fell on the 14th, and ·690 on the 16th. The rainfall at Greystones in October, 1889, was no less than 6·935 inches on 22 days, or more than 11 times as great as the fall in October, 1890, when only ·600 inch fell on 13 days. From January 1st, 1897, up to October 31st, rain fell at Knockdolian on 171 days to the total amount of 32·730 inches. In 1892, the rainfall of the corresponding ten months was 27·223 inches on 140 days; in 1893, 17·801 inches on 133 days; in 1894, 32·221 inches on 154 days; in 1895, 26·270 inches on 131 days; and in 1896, 27·837 inches on 137 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in October was 2·280 inches on 11 days, compared with ·710 inch on 14 days in 1893, 6·460 inches on 17 days in 1894, 2·650 inches on 14 days in 1895, 5·230 inches on 21 days in 1896, and a twelve years' average (1885-1896) of 3·388 inches on 16·2 days. On the 14th, ·67 inch fell. Since January 1, 1897, 25·19 inches of rain have fallen at this station on 169 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in October was 3·175 inches on 13 days. Of this quantity ·970 inch was recorded on the 14th, and ·650 inch on the 16th. The highest temperature in the screen was 62·0° on the 2nd; the lowest was 37·8 on the 12th. The rainfall from January 1 to October 31, inclusive, amounted to 30·664 inches on 157 days.

NOVEMBER.—A dull, mild, foggy month on the whole, but winter burst upon the N.W. of Europe in a violent storm on the 28th and 29th, the barometer falling to 28·43 inches at Fanö, in Denmark, on the morning of the latter day. In Dublin the mean temperature of the entire month was nearly 4° above the average, and that of the week ended Saturday, the 13th, was 54·1°.

In Dublin the arithmetical mean temperature (48·6°) was decidedly above the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 47·8°. In the thirty-two years ending with 1896, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), warmest in 1881 (M. T. = 50·3°).

The mean height of the barometer was 30·127 inches, or 0·267 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·654 inches at 9 p.m. of the 20th, and fell to 29·311 inches at 3 p.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1·343 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 47·8°, or 3·3° below the value for October, and 5·2° below that for September, 1897. The arithmetical mean of the maximal and minimal readings was 48·6°, compared with a twenty-five years' average of 44·7°. On the 12th the screened thermometers rose to 60·9°—wind, S.W.; on the 15th they fell to 34·0°—wind, N.N.W. The minimum on the grass was 31·0°, also on the 15th.

The rainfall was 3·422 inches, distributed over 14 days—the rainfall was much above, while the rainy days were considerably below the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1895, 3·582 inches fell on 21 days.

High winds were noted on 11 days, but attained the force of a gale on only one occasion—the 28th. The atmosphere was more or less foggy in Dublin on the 1st, 2nd, 5th, 10th, 11th, 13th, 21st, 22nd, 23rd, 24th, and 25th. Lunar halos were seen on the 8th and 29th. Hail, sleet, and snow fell in the gale of the 28th, when also lightning was seen.

Throughout the period ended Saturday, the 6th, anticyclonic conditions held in the British Isles and Central Europe. Only in the far North on the one hand and over the Peninsula on the other was there a cyclonic distribution of atmospheric pressure with its attendant high winds and rains. The centre of highest barometer lay over the North Sea, the South of Scandinavia and Denmark until Friday morning, when a very shallow depression formed over the North Sea. During the earlier days of the week the air was soft and genial, there was a good deal of bright sunshine, and high temperatures for the time of year were recorded in the daytime. After Wednesday the sky remained densely clouded, and the diurnal range of temperature was small, the thermometer scarcely rising by day, and not falling much by night, owing to the interference with terrestrial radiation by the clouds. During the whole period the area of greatest cold was located over Germany, France and Belgium, and in that region the isotherm of 30° F. was found at 8 a.m. on and after Wednesday. At the hour named on Thursday the thermometer read 47° at Bodö in Norway (lat. 67° N.) and only 26° in Paris and 27° at Munich. In Dublin the barometer rose to 30·395 inches at 9 a.m. of Saturday (wind, E.S.E.), having fallen to 30·214 inches at 9 p.m. of Wednesday (wind, S.E.). The extreme range of pressure, therefore, amounted to only 0·181 inch. On Tuesday the screened

thermometers rose to 59·3°; on Wednesday they fell to 42·0°. Easterly winds prevailed throughout, except for a few hours on Friday, when there was a light north-westerly breeze. The period was rainless.

The week ended Saturday, the 13th, proved the warmest week which had been observed in November for very many years. It was, however, by no means so dry as its predecessor, for rain fell freely on Monday and Friday in Dublin, while much heavier downpours were reported from the S., centre, and W. of Ireland on several days. Until Friday the centre of a large anticyclone was found overlying the south of Scandinavia, Denmark and the Baltic. At 8 a.m. of Wednesday, the barometer read 30·84 inches at Wisby in the Baltic. A tendency to cyclonic conditions was observed on Sunday in Ireland, and local irregularities in atmospheric pressure over Western Europe generally on Monday and Tuesday caused considerable rainfalls in many places. The isobars afterwards became regular and anticyclonic with improving weather; but on and after Thursday the barometer gave way quickly in the west, so that squally southerly winds, high temperatures, and rainfalls took the place of the quiet, dull and foggy weather which had been prevalent, particularly in England. In that country a sudden chill occurred on Wednesday night, the screened thermometers falling to 29° at Cambridge, 32° at Loughborough, and 33° in London and at Oxford. An equally sudden rise of temperature took place early on Friday morning. This last-named day turned out phenomenally warm in Ireland and in Scotland, the thermometer rising to 61° in Dublin and to 60° at Leith and Nairn. In Dublin the mean atmospheric pressure was 29·928 inches, the barometer rising to 30·212 inches at 9 p.m. of Tuesday (wind, S.S.E.) and falling to 29·390 inches at 9 p.m. of Friday (wind, S.W.). The mean temperature was 54·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·5°. The screened thermometers fell to 46·9° on Monday and rose to 60·9° on Friday. The rainfall was 1·335 inches on five days, ·937 inch being registered on Saturday. The prevailing winds were S.S.E. and S.W.

Mildness was again the predominant characteristic of the weather of the week ended Saturday the 20th, but a "cold snap" of some intensity occurred on Sunday and Monday. A rainstorm prevailed on the east coast of Ireland during the opening hours of the week. It was brought about in connection with a sudden reversal of wind direction and temperature conditions in Scotland and Ireland. At 8 a.m. of Sunday a long curved tongue of low atmospheric pressure stretched from the Bay of Biscay up the Irish Sea and across the South of Scotland to the S.W. of Norway. To the eastward of this curious trough of low barometer, southerly winds and high temperatures prevailed; to the westward, northerly winds, cold rains and sleet, and low temperatures. By 9 a.m. of Monday the thermometer was down to 34° in Dublin, where a reading of 61° had been recorded three days before. A ridge of high pressure now passed quickly eastward across the British Isles leaving gradients for S.W. winds re-established on Tuesday and Wednesday. Both these days proved dull and rainy in Dublin. On Thursday morning a lofty stratum of cirriform cloud cleared off from S.W. and a fine, bright day ensued. Fine, mild weather afterwards lasted to the end, anticyclonic conditions being fully established on Saturday. At 6 p.m. of Friday the barometer was down to 28·73 inches at Bodö in Norway. In Dublin the mean height of the barometer was 30·193 inches, atmospheric pressure ranging from 29·522 inches at 9 a.m. of Sunday (wind, N.N.W.) to 30·654 inches at 9 p.m. of Saturday (wind, E. ?). The mean temperature was 47·7°. The mean of the dry bulb readings at 9 a.m. and 9 p.m. was 47·0°. The screened thermometers fell to 34·0° on Monday and rose to 57·7° on Wednesday. The rainfall amounted to ·696 inch on three days, ·522 inch being recorded on Wednesday. The prevailing winds were N.W and W.S.W.

Dull, foggy, changeable weather ruled during the greater part of the week ended Saturday, the 27th. The general distribution of atmospheric pressure was cyclonic in the North of Europe, anticyclonic in the British Isles and Central Europe. During the first two days a large depression swept eastward across Scandinavia, while the isobar of 30·7 inches lay over the S.E. of England and Germany. On Tuesday the barometer rose in the former, but fell in the latter regions, thus tending to equalise pressure. Much fog prevailed from time to time, and the changes in temperature were sudden and extreme, the thermometer falling fast when the sky cleared, only to rise again as clouds formed. On Thursday morning a shallow depression was found over the mouth of the English Channel. This disturbance caused gloomy wet weather in Ireland, South Wales, and the extreme S.W. of England. A very heavy fall of rain occurred also in Brittany and at Biarritz. The depression quickly filled up, and the anticyclone formed again over England and Germany, so that a rapid decrease of temperature occurred on Thursday night, frost of some intensity being reported on Friday morning, even in London (28°). Meanwhile sudden alternations in pressure off the N.W. of Ireland caused squally S.W. winds, high temperatures and rains in this country. In Dublin the mean height of the barometer was 30·365 inches, pressure ranging from 30·649 inches at 9 p.m. of Sunday (wind, calm) to 29·919 inches at 9 a.m. of Saturday (wind, W.N.W.). The mean temperature was 46·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 45·4°. The screened thermometers fell to 37·9° on Tuesday and rose to 54·8° in the early morning hours of Saturday. The rainfall was ·520 inch on three days, ·236 inch being registered on Friday.

The last three days of the month were rough, cold, and unsettled. On Sunday, the 28th, a deep depression travelled southeastwards across the North Sea, becoming deeper as it approached the Continent. It caused violent gales in Ireland at first, and on the 29th in England and on the Continent. Temperature fell fast as the wind veered towards N. in the rear of the storm centre. Lightning and squalls of hail, sleet, and snow were reported from many places on the night of Sunday, the 28th. The 29th was fine and bright in Dublin, but a heavy rainfall (·610 inch) occurred on the 30th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 27·503 inches on 193 days, compared with 15·378 inches on 141 days during the same period in 1887.

27·298 inches on 167 days in 1895, 22·716 inches on 174 days in 1896, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November was 5·455 inches, distributed over 17 days. Of this quantity 2·200 inches fell on the 13th. From January 1st, 1897, up to November 30th, rain fell on 188 days, and to the total amount of 38·185 inches. The corresponding figures for 1893 were 19·586 inches on 150 days; for 1894, 35·716 inches on 168 days; for 1895, 31·715 inches on 151 days; and for 1896, 28·642 inches on 147 days.

At Cloneevin, Killiney, Co. Dublin, 3·45 inches of rain fell on 15 days, compared with a twelve years' average of 2·698 inches on 17·0 days. The maximal fall in 24 hours was 1·38 inches on the 13th. Since January 1st, 1897, 28·64 inches of rain have fallen at this station on 184 days. The corresponding figures for 1896 were 26·31 inches on 159 days.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall in November was 4·864 inches, distributed over 15 days. The maximal fall in 24 hours was 1·950 inches on the 13th. Since January 1, 1897, the rainfall at Newcastle has amounted to 35·528 inches on 172 days. On November 8th the screened thermometers rose to 58°, on the 16th they fell to 34°.

DECEMBER.—A changeable, open month, with frequent but not heavy rain in the Dublin district, where also frost was almost entirely absent. In the Co. Wicklow, the rainfall was more than double that registered in Dublin, in consequence of the prevailing southerly and south-westerly winds, the rains borne by which were intercepted by the Dublin mountains.

As in December, 1896, large and deep depressions passed north-eastwards across the British Islands during the closing period of the month. Just before this a local frost of great intensity prevailed in the N.E. of Scotland, becoming general in great Britain in the days before Christmas.

In Dublin the arithmetical mean temperature (44·9°) was much above the average (41·3°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 44·1°. In the thirty-two years ending with 1896, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest, in 1865 (M. T. = 46·2°). In 1896, the M. T. was 41·4°.

The mean height of the barometer was 29·751 inches, or 0·124 inch below the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·555 inches at 9 p.m. of the 21st, and fell to 28·740 inches at 11 p.m. of the 29th. The observed range of atmospheric pressure was therefore, 1·815 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 44·1°, or 3·7° below the value for November. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 45·1°, or 3·6° above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 44·9°, compared with a twenty-five years' average of 41·3°. On the 27th the thermometer in the screen rose to 57·8°—wind, S.W.; on the 3rd the temperature fell to 32·9°—wind, W. The minimum on the grass was 27·9°, on the 22nd. There was no frost in the screen, but 12 days of frost on the grass were recorded.

The rainfall was 1·841 inches, distributed over as many as 18 days. The average rainfall for December in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. The rainfall, therefore, was below, while the rainy days were above the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days; in 1896, 4·185 inches of rain fell on 20 days.

A lunar halo was seen on the 9th. High winds were noted on 15 days, and attained the force of a gale on 7 occasions—the 7th, 8th, 13th, 16th, 27th, 29th, and 30th. The atmosphere was more or less foggy in Dublin on the 3rd, 4th, 5th, 12th, 17th, 18th, and 23rd. Snow and sleet fell on the 8th. Hail fell on the 14th. Aurora borealis was seen on the 11th. Lightning occurred on the 14th.

Wednesday, the 1st, was very fine, bright, and bracing in Dublin; but heavy showers of cold rain and hail fell along the coast south of the city, borne in by a strong northerly wind. Thunderstorms occurred at Scilly and Jersey. Thursday was also fine in Ireland generally, sharp frost occurring inland in the morning, a minimum of 27° in the shade being reported from Parsonstown. In the S.E. of England a fresh to strong northerly gale prevailed, accompanied by hail showers. On Friday the barometer gave way in the N.W., so that clouds increased, the wind shifted to S.W., temperature rose, and rain set in. Saturday was dull, damp and at times foggy. The rainfall of this period (1st-4th) was ·273 inch on 2 days.

A cyclonic distribution of atmospheric pressure, and very changeable, unsettled weather held throughout the week ended Saturday, the 11th. Sunday broke damp and foggy in Dublin, but shortly before noon a warm S.W. wind swept away the fog and caused a brisk rise of temperature to 53°. Rain set in at 3 p.m. and lasted throughout the evening. Monday was changeable, rain falling in the forenoon, but it became finer, brighter, and colder later on. On Tuesday a large and ultimately deep depression approached the West of Scotland from the Atlantic. It caused squally S.W. to W. winds and gales, with rain. At first temperature rose considerably—to 55° at several British stations and to 56·6° in Dublin. At 8 a.m. on Wednesday the barometer ranged from 28·46 inches at Sumburgh Head (Shetlands) to 30·47 inches at Lisbon and 30·68 inches in the Azores. In the evening a new depression reached the N. of Scotland from the westward, the barometer sinking to 28·38 inches at Stornoway and 28·39 inches at Wick. This northern depression began to fill up on Thursday, but another disturbance came in over Ireland from W.S.W., so that on Friday the barometer fell to 28·80 inches at Malin Head and to 28·87 inches even in Dublin. Sudden and extreme changes in weather and temperature accompanied these oscillations of atmospheric pressure. On Saturday the barometer rose fast and the weather proved fine, quiet and bright. In Dublin the mean

pressure of the air was 29·522 inches, the range being from 30·027 inches at 9 p.m. of Monday (wind, W.) to 28·870 inches at 3.30 p.m. of Friday (wind, W.S.W.). The corrected mean temperature was 43·7°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 41·9°. On Tuesday the screened thermometers rose to 56·6°; on Wednesday they fell to 36·3°. The rainfall was ·667 inch on six days, ·261 inch being measured on Sunday. Westerly (S.W. to W.N.W.) winds were predominant. A perfect lunar halo was seen on Thursday night; a band of auroral light at 6 p.m. of Saturday.

Quiet and calm at its beginning and close, the week ended Saturday, the 18th, was generally unsettled, with frequent rain and squally southerly and south-westerly winds. It blew a fresh gale for several hours on Thursday. Sunday was a beautiful day—fair and calm. There was some fog in the forenoon, but the afternoon was brilliant. This "pet" day was due to the presence of a secondary depression at the mouth of the English Channel. The effect of this was to equalise barometric pressure in Ireland—at 8 a.m. the extreme limit of variation was only ·11 inch, the barometer marking 29·67 inches at Roche's Point, Cork, and 29·56 inches at Malin Head, Donegal. Hence clear skies and light winds or calms prevailed. Near Dublin the grass was white with hoar frost throughout the day. Between Sunday and Friday the weather was determined by a series of large and deep atmospheric depressions which travelled northwards or north-eastwards across the Atlantic, Ireland and Scotland. These caused rains, high temperatures and squalls. On Thursday the shade thermometers rose to 58° at Loughborough and Oxford, 57° in Dublin and at York, Liverpool and Cambridge, and 56° in London. An anticyclone now surged westward from the Continent, causing calm, foggy and colder weather on Friday evening. Saturday was a day of gloom and fog which became wet in the afternoon. In Dublin the mean height of the barometer was 29·584 inches, pressure ranging from 28·982 inches at 9 p.m. of Monday (wind, S.S.E.) to 30·284 inches at 9 p.m. of Saturday (wind, E.). The corrected mean temperature was 46·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·1°. On Sunday the screened thermometers fell to 33·1°, on Thursday they rose to 56·8°. Rain fell on 4 days to the amount of ·405 inch, ·173 inch being registered on Wednesday. The wind was chiefly southerly and south-westerly.

Throughout the week ended Saturday, the 25th, the British Islands were within the sphere of an anticyclone, the centre of which lay off the east of Scotland at first and was afterwards found over Belgium, Holland, and North Germany. At 8 a.m. of Wednesday the barometer stood at 30·74 inches at Berlin. Owing to this distribution of pressure, the wind in Ireland was at first easterly, then south-easterly, and finally southerly or south-westerly. Early on Christmas morning there was a strong and squally southerly wind, and on this day the thermometer rose to 53·6° in the screen in Dublin. As a rule temperature was much higher in Ireland than in Great Britain, where sharp frosts were felt after Monday. In the N.E. of Scotland an area of intense cold became developed on Sunday—at Nairn the thermometer fell in the screen to 21° on Sunday, 18° on Monday, 17° on Tuesday, 14° on Wednesday, and 12° on Thursday. At the same station the highest shade temperature on Monday was 29°; on Tuesday and Wednesday it was 31°. At 8 a.m. of Thursday the thermometer read 21° at Nairn, 22° at Loughborough and Cambridge, 23° at Aberdeen, 24° at Oxford, 25° at Wick, 26° at York, and 28° in London. The isotherm of 30° embraced nearly the whole of Great Britain, while Ireland was from 10° to 15° warmer. Christmas Day proved exceptionally mild and fine. In Dublin the mean height of the barometer was 30·342 inches, pressure ranging between 30·555 inches at 9 p.m. of Tuesday (wind, E.S.E.) and 30·123 inches at 9 p.m. of Friday (wind, S.S.E.). The corrected mean temperature was 43·8° The mean dry bulb reading at 9 a.m. and 9 p.m. was 43·2°. The screened thermometers fell to 33·8 on Wednesday, and rose to 53·6° on Saturday. The only precipitation was a slight shower on the afternoon of Christmas Day. It yielded no measurable rainfall in the gauge.

Very unsettled and often tempestuous was the weather of the closing period of 1897. Temperature, although very unsteady, ranged high—the mean being some 7° above the average. The weather characteristics just mentioned were brought about by the passage north-eastwards across the Atlantic and British Isles of a succession of large and unusually deep atmospheric depressions. In one of these the barometer sank to 28·19 inches at Stornoway, in the Hebrides, at 2 p.m. of Thursday. On Sunday morning, December 26, frost still held in the midland counties, and the E. and S.E. of England. But in Ireland and Scotland the thermometer stood between 45° and 53°. Next morning it had risen from 16° to 19° in England also, and frost had disappeared from all parts of the British Isles. Southerly and south-westerly gales prevailed on all coasts between Monday and Friday, and rain fell abundantly. Thunder, lightning, and hail were reported from Roche's Point, Co. Cork, on Thursday evening. On Friday afternoon the barometer rose briskly in Ireland, and the wind veered to N.W. with a failing temperature. In Dublin the barometer ranged between 30·061 inches at 9 a.m. of Sunday (wind, S.S.W.) and 28·740 inches at 11 p.m. of Wednesday (wind S.S.E.). On Monday the screened thermometers rose to 57·8°, on Tuesday they fell to 39·4°. S.S.W. winds predominated. Rain fell daily to the total amount of ·496 inch, ·159 being measured on Tuesday.

The rainfall in Dublin during 1897 amounted to 29·344 inches on 211 days, compared with 26·901 inches on 194 days in 1896, 31·242 inches on 194 days in 1895, 29·261 inches on 209 days in 1894, only 20·493 inches on 174 days in 1893, 25·644 inches on 196 days in 1892, 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193 days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a twenty-five years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1897, was 4·700 inches dsitributed over 22 days. Of this quantity ·990 inch fell on the 27th. From January 1st to December 31st, 1897, rain fell at Knockdolian on 210 days, to the total amount of 42·885 inches. The corresponding figures for 1893 were 22·526 inches on 170 days; for 1894, 38·776 inches on 184 days; for 1895, 35·135 inches on 174 days; and for 1896, 36·102 inches on 169 days.

Mr. Robert O'Brien Furlong, M.A., writes:—

The rainfall at Cloneevin, Killiney, in December, 1897, was 2·47 inches on 20 days. The maximal fall in 24 hours was ·48 inch on the 15th. The average December rainfall of the eleven years

1885–96, was 2·490 inches on 17 days. The maximal daily fall was 1·42 inches on September 1st. The rainfall for 1897, though less than that of 1895 (=32·85 inches) or 1894 (=32·64 inches) was largely in excess of the average of the eleven years, 1885–95, viz., 26·58 inches. Rain measuring ·01 inch and upwards fell on 204 days, the average of eleven years being 179. There was a period of absolute drought from May 8th to May 24th. On June 11th there was a thunderstorm. Snow fell on January 14th (lightly) 15th (lying to the 19th) and 22nd (lying to the 29th); also on April 1st.

At the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell during December on 20 days to the amount of 3·865 inches, ·492 inch being measured on the 15th. At this climatological station the highest temperature in the shade was 55·4° on the 7th. the lowest was 33·0° on the 3rd. The rainfall for the year 1897 was 40·193 inches on 194 days, the maximal daily fall having been 2·308 inches on September 1st.

RAINFALL IN 1897,

At 40, Fitzwilliam-square, West, Dublin.

The rainfall was 1·648 inches in excess of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, in 1884, when the measurement was 20·467 inches, and in 1893 with its rainfall of 20·493 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886 when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1897 there were 211 rainy days, or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was much above the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rainy days were only 160, and in 1870 they were only 145.

The rainfall in 24 hours, from 9 a.m. to 9 a.m. exceeded one inch on two occasions in 1892—viz., May 28th (2·056 inches) and August 16th (1·310 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on four occasions, viz., May 15th (1·330 inches); July 24th (1·560 inches); August 25th (1·369 inches); and October 23rd (1·042 inches). In 1895, 1·802 inches fell on January 12th; 1·014 ins. on July 24th; and 1·256 ins. on July 25th. In 1896, 1·563 inches fell on July 8th; 2·020 ins. on July 24th; and 1·388 ins. on December 8th; in 1897, 1·166 inches fell on September, 1st.

Included in the 211 rainy days in 1897 are 15 on which snow or sleet fell, and 30 on which there was hail. In January hail was observed on 5 days, in March on 7 days, in April on 5 days, in May on 5 days, in July on 2 days, in September on 3 days, in October, November, and December on 1 day. Snow or sleet fell on 5 days in January, on 6 days in March, on 2 days in April, and also on 1 day in both November and December. Thunder occurred on 6 occasions during the year—once in January, March, June, and July, and twice in August. Lightning was also seen on two occasions in March, and once in June, October, November, and December.

The rainfall in the first six months was 13·950 inches, on 113 days. The rainfall exceeded 3 inches in June (3·257), August (3·788), and November (3·422). In May it was only 1·139 inches on 14 days.

The rainfall was distributed as follows:—7·069 inches fell on 57 days in the first quarter, 6·881 inches on 56 days in the second, 8·021 inches on 52 days in the third, 7·373 inches on 46 days in the fourth and last quarter.

Aurora borealis was observed on December 11th. More or less fog prevailed on 64 occasions—9 in January, 7 in February, 2 in March, 1 in April and May, 7 in June, 3 in July, 1 in August, 6 in September, 9 in October, 11 in November, and 7 in December. High winds were noted on 143 days—11 in January, 7 in February, 19 in March, 16 in April, 12 in May, 7 in June, 9 in July, 16 in August, 11 in September, 9 in October, 11 in November, and 15 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 39 occasions—4 in January, 5 in February, 9 in March, 2 in April, 1 in May, 2 in June, 1 in July, 3 in August, 1 in September, 3 in October, 1 in November, and 7 in December.

For Abstracts of Meteorological Observations, 1877–97, see pages 186–8.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, AND DEATHS.

1897.

ABSTRACT OF MARRIAGES.—Marriages *registered* in Ireland, pursuant to the

* Including part of the County of the Town of Drogheda.

MARRIAGES, BIRTHS, and **DEATHS** *registered* in the Year 1897.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1897.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL MARRIAGES.	TOTAL BIRTHS.	TOTAL DEATHS.	Births. Including Illegitimate Births. Males.	Births. Including Illegitimate Births. Females.	Births. Illegitimate Births. Males.	Births. Illegitimate Births. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is: + ·058.

NOTE.—This Table has been constructed for the years 1823 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-97—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81 and 1882-91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Westport, 220
Wexford, 61

Y.

Youghal, 93, 126

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 45 (*see* page 52), and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page or pages in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

PROSECUTIONS for OFFENCES against the REGISTRATION ACTS during the Financial Year 1897–98.

The total number of offences against the Registration Acts which were reported by Local Officers, and came under investigation in the General Register Office, during the year ended 31st March, 1898, amounted to 601. As regards many of these, the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation, and in a large number of cases it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed.

However, after careful inquiry into the circumstances of each case, and an examination of the evidence available, prosecutions were directed against the offenders in 115 cases. In 71 of these the parties were convicted and punished; in 38 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law; and in 6 cases the summonses were dismissed.

Among the offences dealt with were the following:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of Coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Registrar to produce Quarterly Returns; loss of Register Book.

The following are a few examples of these cases:—

S. D. was prosecuted at Duncormack Petty Sessions for registering an illegitimate birth as legitimate. She was fined 8*s.* 6*d.* and costs.

P. G. was prosecuted at Ballybay Petty Sessions for giving to the Registrar false information as to the date of a death. He was fined £2 and costs.

J. K. was prosecuted at the Dublin Southern Divisional Police Court for falsely registering a death which did not take place. She was convicted and fined £5, or in default two months imprisonment.

G. S. was prosecuted at Carrigallen Petty Sessions for registering an illegitimate birth as legitimate. He was fined £2, and 10*s.* costs.

J. B. was prosecuted at Riverstown Petty Sessions for giving false information as to the date of a death. He was fined 10*s.*, and 10*s.* costs.

E. L. was prosecuted at Gorey Petty Sessions for giving to the Registrar false information as to her mother's age at death. She was convicted and fined £1 and costs.

A Coroner was prosecuted for neglecting to furnish the Registrar of Deaths with a Certificate of the finding of the Jury in an Inquest held by him. He was fined 40*s.*, and 20*s.* costs.

A Registrar was prosecuted for failing to produce to the Superintendent Registrar certified copies of the entries made in his Register Books. He was fined 20*s.*, and 20*s.* costs.

Another Registrar was prosecuted for carelessly losing his Register Book of Births. He was fined, with £1 costs.

Several parties were prosecuted at different Petty Sessions for neglect to register Births or Deaths, and were convicted and fined (with costs) in varying amounts.

It is to be regretted that, despite the measures adopted by the Department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

However, it sometimes happens that the informant overlooks the fact that the age in the register should correspond with the age in the policy, and, in order to obtain the money, another criminal act is then necessary, namely, making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

Although the greatest pains have been taken to obtain evidence in these cases to convict the offenders, it is to be regretted that on many occasions the proceedings had to be abandoned for want of documentary proof of age, though no reasonable doubt existed that the offence had been committed.

In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register, has been proved to be impossible from the records of the births or baptisms of the children of the deceased; but of course, as a rule, the absence of reliable records of birth or baptism of old persons, makes it exceedingly difficult to deal with cases affecting them.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £127 6*s.* 1*d*, of which sum £85 19*s.* 8*d.* was paid for local professional assistance, and £23 8*s.* for mileage to the Registrars.

DUBLIN CASTLE,

8th July, 1898.

SIR,

I have to acknowledge the receipt of your letter of the 6th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Detailed Annual Report on Marriages, Births, and Deaths, Registered in Ireland in the Year 1897.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Registrar-General,

Charlemont House,

Rutland Square.
